**Mutual Assurance with Moderate Premiums.**

# Scottish Provident

Established 1837. **Institution.** Incorporated 1848.

**HEAD OFFICE:** 6, St. Andrew Square, EDINBURGH.

THE PREMIUMS are so moderate that at usual ages for Assurance **£1200** or thereby may generally be secured from the first for the yearly payment which would elsewhere assure (with profits) **£1000** only—the difference being equivalent to an immediate and certain Bonus of **20** per cent.

**EXAMPLES OF PREMIUMS FOR £100 AT DEATH—WITH PROFITS.**

| Age next Birthday. | 25 | 30* | 35† | 40 | 45 | 50 |
|---|---|---|---|---|---|---|
| During Life ..... | £1 17 5 | £2 2 4 | £2 8 6 | £2 16 6 | £3 8 2 | £4 3 2 |
| 25 Payments ..... | 2 9 8 | 2 13 11 | 2 19 3 | 3 5 11 | 3 15 11 | 4 8 8 |
| 15 Payments..... | 3 7 5 | 3 13 2 | 3 19 11 | 4 7 11 | 4 18 6 | 5 11 2 |

* A Person of **30** may secure **£1000** at death by a yearly payment, *during life*, of **£21 3s. 4d.** Or he may secure **£1000** by 25 payments of **£26 18s. 2d.**, being thus free of payment before age 55.

† At age **35** the Premium *ceasing before age* 60 is, for **£1000, £29 12s. 6d.**, being about the same as many Offices require during life. To **Professional Men** and others whose income depends on health, the limited payment system is recommended.

THE WHOLE SURPLUS goes to the Policyholders, on a system at once safe and equitable,—no share being given to those by whose early death there is a *loss* to the common fund.

**The Surplus** at the latest Investigation was **£1,581,000.**

**Over 60 per cent.** of the Members who died during the last Septennium were entitled to **Bonuses**, which, **notwithstanding that the Premiums do not as a rule exceed the non-profit rates of other Offices**, were, on the average, equal to **an addition of over 50 per cent.** to the Original Assurances.

*ACCUMULATED FUNDS exceed* **£13,500,000.**

ENDOWMENT ASSURANCES WITH PROFITS—SPECIAL CLASS.

*Prospectus with full information on application.*

ARRANGEMENTS as to SURRENDER, NON-FORFEITURE, LOANS ON POLICIES, IMMEDIATE PAYMENT OF CLAIMS, FREE RESIDENCE, &c., are specially liberal.

(Wholesale, Retail, and Export.)

These rare cloths—besides having an extensive sale at home amongst those who value a good article, and are willing to pay the cost at which alone it can be produced—are exported regularly to all parts of the Continent, Egypt, South Africa, United States, Canada, India, China and Japan, Australia and New Zealand, West Indies, South America and Falkland Islands, &c.—qualities exactly suited to the different climates. Now that **shoddy** materials are so abundant everywhere, the opportunity of obtaining these sterling goods so easily and inexpensively by means of the Parcel Post system should be highly appreciated; and friends of colonists at home not already acquainted with them should particularly note the address and make a visit of inspection whenever possible.—W. *Description of some of my Standard Goods.* *Detailed Catalogues on application.*

**IRISH FRIEZES** (strong, rough TWEEDS). These are *par excellence* the Cloths for **Country Suits,** for **Travellers,** for **Sportsmen,** and for **Cold Climates,** being substantial, warm, pliable, hard-wearing, and almost weather-proof; made in various mixtures; dark and light, plain and plaids. Make also most useful and comfortable Ulsters. Price 3s. and 3s. 6d. yard, 28 inches wide.

**IRISH HOMESPUNS.**—These, like the FRIEZES, are admirable for Gentlemen's Country Suits, Fishing, Shooting, Golfing, &c.; but lighter in weight, and more loosely woven. 28 in., 3s. yd. upwards.

Very stout **IRISH TWEEDS** for rough country wear at home or abroad. 2s. 9d. to 3s. 9d. yard. Splendid for Farmers, Gamekeepers, Mechanics, and Settlers in cold climates.

Extra thick **FRIEZES,** plain, plaid, and napped, for heavy travelling, driving, and motoring Ulsters, double width, from 6s. 9d. to 12s. 6d. yard; also the warm, soft, and woolly Duffle Friezes.

Useful and substantial **IRISH TWEEDS** for ordinary wear, town or country, 2s. 9d. to 4s. yard, 28 inches. (For youths' wear many of these are excellent, being hard twisted and closely woven.)

**"SAXONY"** and **WORSTED TWEEDS** for professional or business wear, made from, or mixed with, fine colonial wools. 3s. 6d. to 5s. yard, according to weight and degree of fineness.

**Thin Hand Loom** and **Power Loom TWEEDS** make capital suits for warm climates or for home summer wear, being light, woolly, and cool. 2s. 3d. and 2s. 6d. yard, 28 inches. Some of these are also admirably suited for Ladies' Gowns, Cloaks, and Ulsters, others for Cycling, and still others for small boys' suits.

**DONEGAL HOMESPUNS,** hand-spun and hand-woven by the peasantry, 2s. to 3s. 6d. yard, according to weight and merit, 27 to 30 inches wide. The thin ones are perfect for tropical climates, the medium and heavy for summer and winter lounge wear.

Cork, Galway, Kerry, Tipperary, and Mayo peasant-made Homespuns, 2s. upwards.

A great variety of the famous **HARRIS, LEWIS, SHETLAND,** and **ST. KILDA** HOMESPUNS.

**UNDYED** or **SHEEP'S GREY HOMESPUNS,** light, medium, and heavy, from 2s. 3d.

**IRISH HOMESPUN TWEEDS** for a serviceable suit, and boys' wear, 28 in., 2s. 6d. to 3s. yd. Special **TWEEDS** for Mourning and Clerical wear, 2s. 6d. to 3s. 6d. yard, 28 in. wide.

**NAVY SERGES** of superior manufacture and hard wear, comprising the recognised yachting qualities, those for ordinary wear, and the rough, strong Royal Navy and Police **SERGES;** price according to quality and weight. Also Black and Grey **SERGES.**

**OVERCOATINGS, BLACK** and **GREY COATINGS, WHIP-CORDS** or **RIDING TWEEDS** and **TROUSERINGS,** all of sterling value, and fixed, closest prices.

**FINE FLANNELS** and **TWEEDS,** also thin **CASHMERES;** for **TROPICAL SUITS. SHIRTINGS. TRAVELLING RUGS, 10/- to 25/-. PUTTEES. CAPS, &c.**

**HAND-KNITTED HOSIERY,** made by the Irish peasantry. Socks, 1s., 1s. 3d., 1s. 6d., and 2s. pair. Stockings, plain ribbed, 2s. 9d. to 3s. 9d. pair; Fancy, 3s. 6d. to 5s. 6d. pair. Gloves, 1s. to 2s. pair.

**FLANNEL TWEEDS** for thin tropical suits, made of selected home wools, including natural browns; well spun and woven on hand-looms. They wear extremely well and don't shrink. Anglo-Indians, Cape residents, travellers, and explorers in hot climates are urged to give this speciality of mine a trial. 1s. 9d. to 2s 6d. yard.

---

Patterns of any of above by request. Applicants must be explicit in stating their wants as to quality and purpose, also fancy as regards pattern, and whether for Town or Country wear. A promise must also be given that they will be returned carefully within a week, anywhere in the United Kingdom (those living in London are expected to call and view the stock for themselves);—abroad, by next mail after a week's time for examination.

With few exceptions I allow a discount of 10 % off above prices for orders aggregating over 100 yards at a time—7½ % ditto over 50 yards; and 5 % over 25 yards—an inducement to circulate the patterns amongst friends, especially when sent to distant countries; the higher discounts are great concessions.

Persons abroad, not caring to wait for Patterns to be sent to order from, may depend upon my exercising diligence and fidelity in selecting for them, if they give a clear indication of their wants and enclose a remittance (as I know by experience the kind of cloths best suited to every climate and country). Any surplus will be at their disposal.

Arrangements have been made with tailoring firms of repute to make up these cloths if desired by Customers abroad. Although we do not make the extravagant promises of some advertisers, we shall endeavour to maintain our reputation in this also. To share in this arrangement, send usual measurements, or old suit.

All cloths average 28 inches wide, except when stated to be double width; 7 yards single width or 3½ yards double is the quantity for an ordinary size man's suit; 5 yards to 7 yards for Overcoat, according to size. The weight of a suit length varies from 3 lbs. for a light Homespun or Tweed to 8 lbs. for a thick Frieze. When parcels are to be forwarded by post the cost must be added to remittance; if by rail or sea, charges will be booked forward.

# PREFACE TO THE XXXIX^TH ANNUAL VOLUME.

270443

(1907.)

THE EDITOR trusts that his many subscribers are in the habit of glancing at this ancient institution, the Preface; for he has no other opportunity of expressing his thanks for the co-operation of his well-wishers, many of whom prefer to effect their good work without disclosing their names or addresses.

With regard to the new volume, it may be briefly stated that, in order to simplify the information afforded, several sections have been reconstructed, and rapidity of reference has been thereby increased. The Peerage now contains, in one series of lists, the holders of English, British, or United Kingdom, and Scottish and Irish titles, and the lists of the Baronets and of Knights Bachelors have been re cast and inserted in their correct positions; while the statistics of Finance and Indebtedness have been transferred to the general section dealing with the constituent portions of the British Empire.

Amongst the subjects introduced in this issue are short treatises on Army Reform and the Growth of Travelling Facilities in London, together with an epitomised account of the British Military System; while some of the articles previously included have been enlarged to meet modern requirements, and others have been temporarily or permanently omitted.

The remainder of the book has been subjected to rigid supervision, and the information therein contained has been brought down to the latest possible date.

In conclusion, the Editor begs to repeat his expressions of gratitude for the assistance afforded by his correspondents, and to request that letters may be posted to reach him not later than the last day of *October*, in order that the suggestions therein contained may receive due consideration and adequate attention.

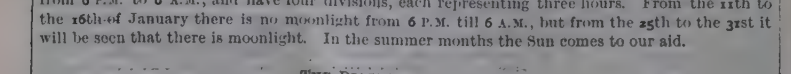
## WHITAKER'S PEERAGE, BARONETAGE, KNIGHTAGE, AND COMPANIONAGE.

A companion volume to the Almanack is published concurrently under this title. It is an Alphabetical Directory of Titled Persons, with a comprehensive Introduction and an Index to Country Seats. Price, neatly half-bound in blue morocco and scarlet cloth, *3s. 6d. net; Edition du Luxe*, royal blue morocco, gilt edges, *5s. net.*

## DURATION OF LIGHT AND DARKNESS.

The second column of the first page of Calendar for every month contains a small diagram showing the amount of Darkness, or of Sun or Moonlight. These small figures represent the twelve hours from 6 P.M. to 6 A.M., and have four divisions, each representing three hours. From the 11th to the 16th of January there is no moonlight from 6 P.M. till 6 A.M., but from the 25th to the 31st it will be seen that there is moonlight. In the summer months the Sun comes to our aid.

The Diagrams used are—



# WHITAKER'S ALMANACK, 1907.

BEING THE THIRD AFTER BISSEXTILE, AND 6 AND 7 OF KING EDWARD VII.

## Eclipses, Occultations, and other Celestial Phenomena.

*January* 1. Day breaks at 6*h.* 2*m. morn.*, and Twilight ends at 6*h.* 4*m. aft.*, the length of the Day being 7*h.* 50*m.*

*Jan.* 5. Mean time of Sun's semidiameter passing the meridian, 1*m.* 10·78*s.*

*Jan.* 5. Occultation of B.A.C 3837; magnitude 5·9. The disappearance takes place at 5*h.* 8*m. morn.*, 106° from the vertex; the reappearance at 6*h.* 23*m. morn.*, 269° from the vertex.

*Jan.* 10. Occultation of γ Librae; magnitude 4·1. The disappearance takes place at 5*h.* 44*m. morn.*, 78° from the vertex; the reappearance at 6*h.* 20*m. morn.*, 11° from the vertex.

*Jan.* 11. Venus in conjunction with the Moon, 5*h.* 12*m. morn.*, ♀ 0° 17′ N.

*Jan.* 14. A Total Eclipse of the Sun, invisible at Greenwich. See p. 71.

*Jan.* 20. Mean time of Sun's semidiameter passing the meridian, 1*m.* 9·58*s.*

*Jan.* 21. Occultation of ξ² Ceti; magnitude 4·3. The disappearance takes place at 9*h.* 7*m. aft.*, 64° from the vertex; the reappearance at 10*h.* 12*m. aft.*, 188° from the vertex.

*Jan.* 26. Occultation of ν Geminorum; magnitude 4·1. The disappearance takes place at 6*h.* 40*m. aft.*, 151° from the vertex; the reappearance at 7*h.* 45*m. aft.*, 264° from the vertex.

*Jan.* 27. Occultation of 56 Geminorum; magnitude 5·0. The disappearance takes place at 7*h.* 39*m. aft.*, 77° from the vertex; the reappearance at 8*h.* 27*m. aft.*, 352° from the vertex.

*Jan.* 29. Occultation of θ Cancri; magnitude 5·6. The disappearance takes place at 6*h.* 9*m. morn.*, 107° from the vertex; the reappearance at 6*h.* 49*m. morn.*, 202° from the vertex.

*Jan.* 29. A Partial Eclipse of the Moon, invisible at Greenwich. See p. 72.

*Jan.* 31. Occultation of 7 Leonis; magnitude 5·3. The disappearance takes place at 9*h.* 19*m. aft.*, 100° from the vertex; the reappearance at 10*h.* 5*m. aft.*, 10° from the vertex.

In this month the Mornings increase 25*m.*, and the Afternoons 46*m.*

## MORNING AND EVENING STARS.

☿ MERCURY is a morning star, rising in the S.E. ; towards the end of the month too near the Sun for observation.
♀ VENUS is a morning star, rising S.E. by E.
♂ MARS is a morning star, rising in E.S.E.
♃ JUPITER in Gemini, setting in the N.W. In conjunction with the Moon on the 26th, at *2h. 4m. aft.* ♃ 2° 37′ N.
♄ SATURN is an evening star, setting W. by S.

the early part of the month the constellations elopardus, Lynx, Gemini, Monoceros, and s Major are on the meridian about midnight. emini there is a fine compressed cluster of l stars, nearly midway between γ and ζ inorum, consisting of small stars densely ded together, and in small telescopes ly distinguishable from a nebula. It can best observed on the nights immediately before and after the 13th. There is a very fine cluster in Canis Major, in R.A. *6h. 43m.* and Decl. 20° 39′ S., 4° South of Sirius. With a very small astronomical telescope the individual stars can be easily distinguished ; and with a low-power eye-piece, on the larger instruments, the field appears full of stars of various magnitudes. Neptune can be well observed in this month, and Ceres in early part of the month. See p. 75.

* The days thus indicated throughout the Almanack are those on which High Tides may be expected. Strong northerly winds in the North Sea and a low barometer with heavy rains in the counties drained by the Thames will probably cause a higher rise of the river, and the low-lying riverside districts to be flooded.

## MORNING AND EVENING STARS.

☿ MERCURY is an evening star, setting S.W. by W. in first half of the month, and due W. towards end of month. In conjunction with Saturn on the 21st, at 11h. 17m. morn. ☿ 2° 40′ N.

♀ VENUS is a morning star, rising S.E. by E.

♂ MARS is in Scorpio, not far from Antares.

♃ JUPITER in Gemini, near to η.

♄ SATURN in Aquarius, setting about 7h. in the evening, W. by S.

In the early part of this month the constellations Ursa Major, Lynx, Cancer, and a part of Hydra are on the meridian about midnight. In Cancer there is a very beautiful cluster of stars, preceding α Cancri about 8m. in R.A. and nearly the same declination, consisting of some 200 stars from the 8th to 13th magnitudes. The fine group of stars in Cancer, called "Præsepe," can be best observed in this month on the days immediately preceding and following the 12th. It does not consist of a very great number of stars, but the components are, as compared with those of other clusters, of considerable magnitude. It is situated in R.A. 8h. 34m. and Decl. 20° 20′ N., about 1° to the west of a line joining the stars δ and γ Cancri.

The triple star ζ in Cancer may be examined in this month: it will be found in R.A. 8h. 6m. 53s. and Decl. 17° 56′ N. Neptune can be observed in this month. See p. 75.

## Eclipses, Occultations, and other Celestial Phenomena.

*March* 1. Day breaks at 4*h.* 55*m. morn.*, and Twilight ends at 7*h.* 31*m. aft.*, the length of the Day being 10*h.* 47*m.*

*Mar.* 2. Mercury at greatest elongation (18°) East, 2*h. morn.*

*Mar.* 4. Occultation of 51 Librae; magnitude 5·9. The disappearance takes place at 11*h.* 50*m. aft.*, 124° from the vertex; the reappearance at 0*h.* 48*m. morn.*, on the 5th, 349° from the vertex.

*Mar.* 5. Mean time of Sun's semidiameter passing the meridian, 1*m.* 5·0*s.*

*Mar.* 16. Vesta in conjunction with the Moon, 3*h. aft.* Vesta 0° 7′ N.

*Mar.* 20. Mean time of Sun's semidiameter passing the meridian, 1*m.* 4·3*s.*

*Mar.* 20. Occultation of 63 Tauri; magnitude 5·6. The disappearance takes place at 0*h.* 2*m. morn.*, 32° from the vertex; at the time of reappearance the star will be below the horizon at Greenwich.

*Mar.* 20. Occultation of *m* Tauri; magnitude 5·1. The disappearance takes place at 9*h.* 24*m. aft.*, 82° from the vertex; the reappearance at 10*h.* 17*m. aft.*, 187° from the vertex.

*Mar.* 21. Sun enters the sign Aries. Spring commences, 6*h.* 33*m. aft.*

*Mar.* 21.—Occultation of $\chi^1$ Orionis; magnitude 4·7. The disappearance takes place at 7*h.* 16*m. aft.*, 42° from the vertex; the reappearance at 8*h.* 30*m. aft.*, 255° from the vertex.

*Mar.* 22. Occultation of $\lambda^1$ Orionis; magnitude 4·8. The disappearance takes place at 0*h.* 30*m. morn.*, 56° from the vertex; the reappearance at 1*h.* 25*m. morn.*, 231° from the vertex.

*Mar.* 29. Occultation of *b* Virginis; magnitude 5·2. The disappearance takes place at 0*h.* 13*m. morn.*, 150° from the vertex; the reappearance at 1*h.* 9*m. morn.*, 239° from the vertex.

*Mar.* 30. Occultation of 80 Virginis; magnitude 5·8. The disappearance takes place at 7*h.* 42*m. aft.*, 218° from the vertex; the reappearance at 8*h.* 47*m. aft.*, 264° from the vertex.

In this month the Mornings increase 1*h.* 7*m.*, and the Afternoons 52*m.*

## Morning and Evening Stars.

☿ Mercury is an evening star till about the 19th, setting in the W.; Morning Star at end of month, rising a little S. of E. In conjunction with the Moon on the 14th, at *o*h. 54*m*. aft. ☿ 8° 30′ N.

♀ Venus is a morning star throughout the month, rising S.E. by E. In conjunction with the Moon on the 10th, at 6*h*. 42*m*. aft. ♀ 1° 28′ N.

♂ Mars rises about 2*h*. after midnight in S.E. by E. In conjunction with the Moon on the 7th, at 10*h*. 26*m*. morn. ♂ 3° 13′ S.

♃ Jupiter in Gemini; souths early in evening. Near *η* Gemini.

♄ Saturn too near the Sun for observation in this month.

At midnight, in the beginning of March, the constellations Ursa Major, Leo, Crater, and Hydra are on the meridian. In Ursa Major is a large planetary Nebula, appearing as a mass of attenuated light, from 3′ to 4′ in diameter; it lies 2½° S.E. of *β* Ursa Majoris. The spectroscopic examination leads to the inference that it is mainly a mass of incandescent gas.

Virgo comes to the meridian about midnight towards the end of this month. Between Virgo and Coma Berenices is a large Nebula, one of the class known as "Spiral Nebulæ," situated in R.A. 12*h*. 14*m*. and Decl. 15° 0′ N. With a large telescope of 8 inches aperture it appears to be resolvable in the centre into two bright star-like points. This constellation is thickly strewed with nebulæ, which may be best observed on the evenings immediately before and after the 13th of the month.

## MORNING AND EVENING STARS.

☿ MERCURY is a morning star, rising E. by S. early in the month, and nearly due E. towards the end of the month.

♀ VENUS is a morning star. Rises E.S.E., and at end of month nearly due E. In conjunction with the Moon on the 9th, at 11*h.* 26*m.* morn. ♀ 2° 32′ N.

♂ MARS is a morning star, rising S.E.

♃ JUPITER in Gemini, a little North of *μ*.

♄ SATURN is a morning star, rising E. by S.

At the latter part of April the constellations raco, Bootes, and Libra will be on the meridian out midnight. An irresolvable double Nebula in nes Venatici, about 4° S.W. of *η* Ursæ Majoris, n be observed in this month. The Southern bula is surrounded by a faint ring of nebulous ht, and was called by Herschel, in his Catalogue, he Halo Nebula." Later observations placed among the "Spiral" Nebulæ. That this is not true incandescent Nebula is shown by the sence of bright lines in its spectrum. In R.A. 15*h.* 14*m.*, Decl. 2° 28′ N., is a very fine cluster of stars, condensed into great brilliancy towards the centre. Sir W. Herschel was able to distinguish over 200 stars in this group in the field of his 40-ft. reflector, but found the middle portion so condensed that the individual stars could not be separated. The stars range from the 12th to 15th mag. The evenings about the 12th are the best for observing these objects. Juno can be well observed in this month. See page 75.

## Eclipses, Occultations, and other Celestial Phenomena.

*May* 1. Day breaks at 2*h.* 3*m. morn.*, and Twilight ends at 9*h.* 51*m. aft.*, the length of the Day being 14*h.* 44*m.*

*May* 1. Occultation of ξ Ophiuchi; magnitude 4·5. The disappearance takes place at 3*h.* 38*m. morn.*, 95° from the vertex; the reappearance at 4*h.* 50*m. morn.*, 253° from the vertex.

*May* 2. Mars in conjunction with the Moon, 6*h.* 36*m. aft.* ♂ 2° 20′ S.

*May* 3. Occultation of B.A.C. 6607; magnitude 5·7. The disappearance takes place at 0*h.* 38*m. morn.*, 164° from the vertex; the reappearance at 1*h.* 29*m. morn.* 263° from the vertex.

*May* 5. Mean time of Sun's semidiameter passing the meridian, 12*m.* 6·1*s.*

*May* 7. Saturn in conjunction with the Moon, 9*h.* 12*m. aft.* ♄ 2° 29′ N.

*May* 9. Venus in conjunction with the Moon, 9*h.* 2*m. morn.* ♀ 3° 25′ N.

*May* 10. Mercury in conjunction with the Moon, 11*h.* 32*m. aft.* ☿ 3° 26′ N.

*May* 12. Vesta in conjunction with the Moon, 6*h. morn.* Vesta 0° 29′ N.

*May* 16. Jupiter in conjunction with the Moon, 11*h.* 44*m. morn.* ♃ 1° 31′ N.

*May* 20. Mean time of Sun's semidiameter passing the meridian, 12*m.* 7·3*s.*

*May* 22. Jupiter and Neptune in conjunction, 0*h. morn.* ♃ 1° 0′ S.

*May* 27. Occultation of θ Librae; magnitude 4·3. The disappearance takes place at 4*h.* 6*m. morn.*, 28° from the vertex; at the reappearance the star will be below the horizon at Greenwich.

*May* 29. Occultations of $\nu^1$ and $\nu^2$ Sagittarii; magnitude 5·0 and 5·2 respectively. The disappearances take place at 10*h.* 46*m. aft.*, 159° from the vertex, and 11*h.* 5*m. aft.*, 136° from the vertex, respectively; the reappearances at 11*h.* 41*m. aft.*, 267° from the vertex, and 0*h.* 11*m. morn.* of 30th, at 283° from the vertex, respectively.

In this month the Mornings increase 44*m.*, the Afternoons 44*m.*

### Morning and Evening Stars.

☿ Mercury is a morning star in the first half of the month, rising E. by N. An evening star in the last week, setting N.W. by W.

♀ Venus is a morning star in this month, rising E. by N.

♂ Mars is a morning star in the early part of the month, rising in S.E. In conjunction with Uranus on the 1st, at 11*h.* 12*m.* aft. ♂ 0° 46′ S. In conjunction with the Moon on the 30th, at *oh.* 41*m.* aft. ♂ 3° 13′ S.

♃ Jupiter is an evening star, in Gemini, setting in the N.W.

♄ Saturn is a morning star, rising E. by S.

Towards the end of May we shall find the constellations Draco, Hercules, Ophiuchus, and Scorpio on the meridian about midnight.

Hercules contains a very splendid cluster of stars situated in R.A. 16*h.* 38*m.* and Decl. 36° 41′ N. This, like most of the star-clusters, is condensed in the centre, and may be easily resolved with moderate telescopic aid; and a few days about the 11th, when the Moon is absent, it may, if the opportunity is taken of a very clear night, be seen with the naked eye plainly between the stars ζ and η Herculis, rather nearer to η. This cluster, discovered by Halley in 1714, is one of the most beautiful examples of these bodies to be seen in the heavens. With the great Refractor of the Lick Observatory the nebulous glow at the centre has been resolved into separate points. Juno may be well observed in this month. See p. 75.

Mean Longitude of Moon's Ascending Node, June 1, 115° 47′ ♋.

## Eclipses, Occultations, and other Celestial Phenomena.

*June* 1. There is no real night in this month, but either daylight or twilight, the length of the Day being 16*h*. 13*m*.

*June* 4. Saturn in conjunction with the Moon, 6*h*. 15*m*. *morn*. ½ 2′ 41′ N.

*June* 5. Mean time of Sun's semidiameter passing the meridian, 1*m*. 8·3*s*.

*June* 6. Mars stationary in the heavens, 2*h*. *morn*.

*June* 8. Venus in conjunction with the Moon, 1*h*. 3*m*. *aft*. ♀ 3° 18′ N.

*June* 9. Vesta in conjunction with the Moon, 1*h*. *aft*. Vesta 0° 11′ N.

*June* 11. Mercury in conjunction with ε Geminorum, 0*h*. *aft*. At this time the star will be a little to the North of the planet, but separated from it by less than one minute of arc.

*June* 12. Mercury in conjunction with the Moon, 9*h*. 8*m*. *aft*. ☿ 3° 9′ N.

*June* 12. Neptune in conjunction with the Moon, 9*h*. 47*m*. *aft*. Neptune 0° 16′ N.

*June* 13. Jupiter in conjunction with the Moon, 5*h*. 38*m*. *morn*. ♃ 0° 57′ N.

*June* 15. Mercury and Jupiter in conjunction, 8*h*. 30*m*. *aft*. ☿ 1′ 41′ N.

*June* 20. Mean time of Sun's semidiameter passing the meridian, 1*m*. 8·7*s*.

*June* 21. Occultation of B.D. −8° 3737; magnitude 6·0. The disappearance takes place at 8*h*. 4*m*. *aft*., 74° from the vertex; the reappearance at 8*h*. 55*m*. *aft*., 337° from the vertex.

*June* 22. Sun enters sign Cancer. Summer commences, 2*h*. 23*m*. *aft*.

*June* 24. Occultation of ξ Ophiuchi; magnitude 4·5. The disappearance takes place at 11*h*. 40*m*. *aft*., 77° from the vertex; the reappearance at 0*h*. 48*m*. *morn*., on the 25th, 281° from the vertex.

*June* 26. Mars in conjunction with the Moon, 6*h*. 56*m*. *aft*. ♂ 5° 20′ S.

*June* 27. Mercury at greatest elongation (25°) East, 11*h*. *morn*.

In this month the Mornings increase 7*m* to the 21st, and decrease 4*m*. to end of the month; the Afternoons decrease 14*m*.

n the last week of June the constellations aco, Lyra, a portion of Hercules, Scutum bieski, and a part of Sagittarius will south out midnight.

In Sagittarius there is a notable and very extensive Nebula, somewhat like a horse-shoe in shape, will be found in R.A. 18*h.* 15*m.*, and Decl. 16° S. The spectroscope shows this Nebula to nsist of a mass of incandescent gas. Professor lden says that one arm of the Nebula has changed its position since Herschel's time. In good weather can be well seen with a small telescope.

In Sagittarius, a little West and North of λ, is a globular cluster of very small stars, densely crowded, to be seen only with difficulty in small telescopes. Owing to its great southern declination there is but little chance of seeing it except when southing. Uranus may be well observed in this month. See p. 75.

### MORNING AND EVENING STARS.

☿ MERCURY is an evening star, setting N.W. in the first half of the month, and, towards the end, N.W. by W. In conjunction with Neptune on the 13th, at 1*h.* 52*m.* morn. ☿ 2° 52′ N.

♀ VENUS is a morning star, rising E.N.E.; after the 12th, N.E. by E.

♂ MARS rises between 10*h.* and 11*h.* in the evening, in the S.E.

♃ JUPITER is an evening star, in Gemini, very near to δ on the 19th, setting N.W. by W.

♄ SATURN is a morning star, rising E. by S. Nearly stationary in Pisces.

## Eclipses, Occultations, and other Celestial Phenomena.

*July* 1. In this month there is no real night till after the 21st.

*July* 7. Occultation of 63 Tauri; magnitude 5·6. At the disappearance the star will be below the horizon at Greenwich; the reappearance takes place at 2*h.* 48*m.*, *morn.*, 293° from the vertex.

*July* 10. An Annular Eclipse of the Sun, invisible at Greenwich. See p. 71.

*July* 14. Occultation of *l* Leonis; magnitude 5·3. The disappearance takes place at 10*h.* 0*m.* *aft.*, 88° from the vertex; at reappearance the star will be below the horizon at Greenwich.

*July* 20. Occultation of *θ* Librae; magnitude 4·3. The disappearance takes place at 11*h.* 58*m.* *aft.*, 52° from the vertex; star below the horizon at Greenwich at reappearance.

*July* 23. Occultations of $\nu^1$ and $\nu^2$ Sagittarii; magnitude 5·0 and 5·2 respectively. The disappearances take place at 7*h.* 52*m.* *aft.* and 8*h.* 21*m.* *aft.*, 134° and 111° from the vertex, respectively; the reappearances at 9*h.* 3*m.* *aft.* and 9*h.* 30*m.* *aft.*, 278° and 291° from the vertex, respectively.

*July* 25. A Partial Eclipse of the Moon, partly visible at Greenwich. See p. 71.

*July* 28. Occultation of 30 Piscium; magnitude 4·7. The disappearance takes place at 11*h.* 10*m.* *aft.*, 114° from the vertex; the reappearance on the 29th at 0*h.* 14*m.* *morn.*, 265° from the vertex.

*July* 29. Occultation of 33 Piscium; magnitude 4·6. The disappearance takes place at 1*h.* 4*m.* *morn.*, 119° from the vertex; the reappearance at 2*h.* 6*m.* *morn.*, 229° from the vertex.

*July* 29. Occultation of 20 Ceti; magnitude 4·9. The disappearance takes place at 11*h.* 23*m.* *aft.*, 164° from the vertex; the reappearance at 11*h.* 55*m.* *aft.*, 223° from the vertex.

*July* 31. Occultation of $\xi^2$ Ceti; magnitude 4·3. At disappearance the star will be below the meridian at Greenwich; the reappearance takes place at 11*h.* 18*m.* *aft.*, 332° from the vertex.

In this month the Mornings decrease 34*m.*, and the Afternoons 28*m.*

he Annular Nebula in Lyra, situated between nd γ, is the best example of the Annular Nebu- ; the heavens containing, as far as is at present own, comparatively few examples of this class. requires a rather good telescope to see it well : is in R.A. *18h. 50m.* and Decl. 32° 54′ N. It exhibits a spectrum as if composed of an incandescent gas. There is also a globular cluster in Lyra, as nearly as possible midway between γ Lyræ and β Cygni. It is in R.A. *19h. 13m.*, Decl. 30° 1′ N. The best nights for the observation of these objects are those just before and after the 10th.

Uranus may be well observed in the early part of the month. See p. 75.

## Eclipses, Occultations, and other Celestial Phenomena.

*September* 1. Day breaks at 3*h.* 7*m. morn.*, and Twilight ends at 8*h.* 53*m. aft.*, the length of the Day being 13*h.* 35*m.*

*Sept.* 2. Neptune in conjunction with the Moon, 10*h.* 28*m. aft.* Neptune 0° 5′ S.

*Sept.* 3. Mercury and Venus in conjunction, 7*h.* 54*m. aft.* ☿ 0° 26′ N.

*Sept.* 4. Jupiter in conjunction with the Moon 0*h.* 55*m. aft.* ♃ 0 38′ S.

*Sept.* 5. Mean time of Sun's semidiameter passing the meridian, 1*m.* 4·0*s.*

*Sept.* 7. Mercury in conjunction with the Moon, 8*h.* 18*m. aft.* ☿ 2° 33′ S.

*Sept.* 16. Mars in conjunction with the Moon, 11*h.* 13*m. aft.* ♂ 4° 27′ S.

*Sept.* 20. Mean time of Sun's semidiameter passing the meridian, 1*m.* 3·8*s.*

*Sept.* 21. Occultation of $\psi^3$ Aquarii; magnitude 5·2. The disappearance takes place at 1*h.* 34*m. morn.*, 46° from the vertex: the reappearance at 2*h.* 40*m. morn.*, 208° from the vertex.

Occultations of 30 and 33 Piscium; magnitudes 4·7 and 4·6 respectively. The disappearances take place at 7*h.* 10*m. aft.* and 9*h.* 4*m. aft.*, 143° and 153° from the vertex, respectively: the reappearances at 7*h.* 59*m. aft.* and 9*h.* 37*m. aft.*, 242° and 207° from the vertex, respectively.

*Sept.* 21. Saturn in conjunction with the Moon, 1*h.* 21*m. aft.* ♄ 2° 12′ N.

*Sept.* 24. Sun enters sign Libra. Autumn commences, 5*h.* 9*m. morn.*

*Sept.* 25. Occultation of $\mu$ Ceti; magnitude 4·4. The disappearance takes place at 0*h.* 51*m. morn.*, 127° from the vertex; the reappearance at 1*h.* 46*m. morn.*, 209° from the vertex.

*Sept.* 26. Occultation of $5^2$ Tauri; magnitude 4·7. The disappearance takes place at 11*h.* 57*m. aft.*, 84° from the vertex: the reappearance at 0*h.* 59*m. morn.*, on the 27th, 310° from the vertex.

*Sept.* 30. Neptune in conjunction with the Moon, 7*h.* 5*m. morn.* Neptune 0° 20′ S.

In this month the Mornings decrease 45*m.*, and the Afternoons 1*h.* 6*m.*

Mean Longitude of Moon's Ascending Node, October 1, 109° 19′ ♋.

## Eclipses, Occultations, and other Celestial Phenomena.

*October* 1. Day breaks at 4*h.* 8*m. morn.*, and Twilight ends at 7*h.* 32*m. aft.*, the length of the Day being 13*h.* 40*m.*

*Oct.* 2. Jupiter in conjunction with the Moon, 6*h.* 24*m. morn.* ♃ 1° 11′ S.

*Oct.* 3. Occultation of 8 Leonis magnitude 5·9. The disappearance takes place at 4*h.* 4*m. morn.*, 127° from the vertex: the reappearance at 5*h.* 11*m. morn.*, 334° from the vertex.

*Oct.* 5. Mean time of Sun's semi-diameter passing the meridian, 1*m.* 4·3*s.*

*Oct.* 5. Mercury at greatest distance from the Sun, 0*h. aft.*

*Oct.* 7. Venus in conjunction with the Moon, 6*h.* 56*m. aft.* ♀ 4° 15′ S.

*Oct.* 8. Mercury in conjunction with the Moon, 9*h.* 49*m. aft.* ☿ 6° 54′ S.

*Oct.* 13. Occultation of B.A.C. 6448: magnitude 5·9. The disappearance takes place at 8*h.* 14*m. aft.*, 83° from the vertex: as the reappearance the star will be setting at Greenwich.

*Oct.* 15. Mars in conjunction with the Moon, 5*h.* 30*m. morn.* ♂ 1° 47′ S.

*Oct.* 18. Saturn in conjunction with the Moon, 6*h.* 20*m. aft.* ♄ 2° 13′ N.

*Oct.* 20. Mean time of Sun's semi-diameter passing the meridian, 1*m.* 5·4*s.*

*Oct.* 23. Mercury at greatest elongation (24°) East, 10*h. morn.*

*Oct.* 24. Occultation of *i* Tauri; magnitude 5·1. The disappearance takes place at 9*h.* 16*m. aft.*, 122° from the vertex; the reappearance at 10*h.* 18*m. aft.*, 285° from the vertex.

*Oct.* 27. Venus in close conjunction with *α* Librae, 7*h. morn.* ♀ 0° 5′ N.

*Oct.* 27. Occultation of 63 Geminorum; magnitude 5·3. The disappearance takes place at 10*h.* 10*m. aft.*, 120° from the vertex; the reappearance at 11*h.* 7*m. aft.*, 313° from the vertex.

*Oct.* 29. Jupiter in conjunction with the Moon, 9*h.* 35*m. aft.* ♃ 1° 41′ S.

In this month the Morning decrease 52*m.*, and the Afternoon 1*h.* 4*m.*

### Morning and Evening Stars.

☿ Mercury is an evening star throughout the month, setting soon after the Sun in S.W. by S.

♀ Venus is an evening star, setting W. by S., and towards end of month W.S.W.

♂ Mars souths in the early evening. Is in Sagittarius till middle of month, when it enters Capricornus.

♃ Jupiter in Cancer; near to δ Cancri at beginning of month.

♄ Saturn nearly in the same position as last month.

On the 1st of October, Cassiopeia, Andromeda, Pisces, and Cetus are on the meridian at midnight; while Cancer and Orion are rising, and Hercules and Capricornus setting.

In Andromeda, near to the 4th mag. star $\nu$, is a large and irresolvable Nebula in the form of an elongated ellipse. It is situated in R.A. $0h.$ $37m.$ and Decl. 40° 43′ N. In Sept., 1885, a decided stellar nucleus was observed in R.A. $0h.$ $36m.$ $31s.$, Decl. 40° 38′ N., probably unconnected with the Nebula. Very many minute stars can be seen within the Nebula.

A fine double cluster of stars, situated midway on a line joining α Persei and γ Cassiopeiæ, may be observed in this month. The northern cluster is a magnificent collection of stars, 30′ in diameter, ranging in magnitude from the 6th to 14th. The smaller southern cluster, 15′ in diameter, is less rich in stars, and much condensed toward the centre. On fine nights, without moonlight, such as those about the 6th, these objects afford one of the most beautiful subjects for observation.

Mean Longitude of Moon's Ascending Node, November 1, 107° 41′ ♋.

## Eclipses, Occultations, and other Celestial Phenomena.

*November* 1. Day breaks 5*h.* 1*m. morn.*, and Twilight ends at 6*h.* 27*m. aft.*, the length of the Day being 9*h.* 40*m.*

*Nov.* 3. Mercury stationary in the heavens, 10*h. aft.*

*Nov.* 5. Mean time of Sun's semidiameter passing the meridian 1*m.* 7·18.

*Nov.* 6. Venus in conjunction with the Moon, 9*h.* 52*m.* ☿ ♀ 4° 0′ S.

*Nov.* 7. Mercury in conjunction with the Moon, 0*h.* 8*m. morn.* ☿ 6° 0′ S.

*Nov.* 7. Mercury and Venus in conjunction, 4*h.* 16*m. aft.* ☿ ♀ 1° 54′ S.

*Nov.* 12. Mars in conjunction with the Moon, 4*h.* 11*m. aft.* ♂ 0° 58′ N.

*Nov.* 14. Mercury in inferior conjunction with the Sun, 0*h.* 7*m. aft.*

*Nov.* 14. Transit of Mercury across Sun's disc, visible at Greenwich. See p. 71.

*Nov.* 14. Saturn in conjunction with the Moon, 10*h.* 24*m. aft.* ♄ 2° 26′ N.

*Nov.* 18. Occultation of $\mu$ Ceti magnitude 4·4. The disappearance takes place at 5*h.* 7*m. aft.*, 126° from the vertex; the reappearance at 6*h.* 1*m. aft.*, 265° from the vertex.

*Nov.* 20. Mean time of Sun's semidiameter passing the meridian 1*m.* 8·8.

*Nov.* 20. Occultation of 81 Tauri and 82 Tauri; magnitude 3·9 and 4·7 respectively. Both stars below the horizon at Greenwich at disappearance; the reappearances take place at 5*h.* 4*m. aft.* and 5*h.* 35*m. aft.*, 329° and 288° from the vertex, respectively.

*Nov.* 22. Occultation of $\zeta$ Tauri; magnitude 3·0. The disappearance takes place at 5*h.* 6*m. morn.*, 2° from the vertex; the reappearance at 5*h.* 54*m. morn.*, 271° from the vertex.

*Nov.* 24. Occultation of $\delta$ Geminorum; magnitude 3·6. The disappearance takes place at 3*h.* 41*m. morn.*, 70° from the vertex; the reappearance at 5*h.* 8*m. morn.*, 261° from the vertex.

*Nov.* 26. Jupiter in conjunction with the Moon, 8*h.* 34*m. morn.* ♃ 1° 57′ S.

In this month the Mornings decrease 49*m.*, and the Afternoons 40*m.*

On the 1st of November, Perseus, Aries, and Cetus are on the meridian at midnight.

An irresolvable Nebula $2\frac{1}{2}°$ to the East of γ Andromedæ may be observed in this month. It was discovered by Miss Herschel, with a small reflecting telescope of twenty-seven inches in focal length. It is a very elongated Nebula, 15′ long by 3′ broad, with a cleft, dark in the middle, and suggests the idea of a vast flat ring seen very obliquely. It is in R.A. 2*h.* 16*m.* and Decl. 41° 49′ N. The best evenings for observing it are those immediately before and after the 5th.

### Morning and Evening Stars.

☿ Mercury is an evening star at beginning of month, setting S.W. by W., and a morning star towards the end, rising E.S.E. In inferior conjunction with the Sun on the 14th, at *0h. 7m. aft.* Transit across the Sun's disc, see p. 71.

♀ Venus is an evening star, setting soon after Sun, S.W. by W.

♂ Mars in Capricornus, near to δ on the 17th. Sets about *10h. 40m. aft.*, W.S.W.

♃ Jupiter in the eastern portion of Cancer, rising about *10h. aft.*, N.E. by E.

♄ Saturn souths in the evening about *8h. aft.* In Aquarius.

Mean Longitude of Moon's Ascending Node, December 1, 106° 6′ ☋.

Eclipses, Occultations, and other Celestial Phenomena.

*December* 1. Day breaks at 5*h*. 41*m*. *morn*., and Twilight ends at 5*h*. 57*m*. *aft*., the length of the Day being 8*h*. 8*m*.

*Dec.* 1. Mercury at greatest elongation (20°) West, 2*h*. *aft*.

*Dec.* 5. Mean time of Sun's semidiameter passing the meridian 1*m*. 10″3.

*Dec.* 8. Occultation of 4 Capricorni; magnitude 6·0. The disappearance takes place at 5*h*. 15*m*. *aft*., 2° from the vertex; the reappearance at 5*h*. 54*m*. *aft*., 285° from the vertex.

*Dec.* 12. Occultation of 30 Piscium, 33 Piscium, B.A.C. 17 magnitudes 4·7, 4·6, 5·9, respectively. The disappearances take place at 3*h*. 35*m*. *aft*., 5*h*. 28*m*. *aft*., 8*h*. 41*m*. *aft*. at 51°, 64′, 84° from the vertex, respectively; the reappearances at 4*h*. 28*m*. *aft*., 6*h*. 42*m*. *aft*., 9*h*. 32*m*. *aft*., 307°, 249°, 170° from the vertex, respectively.

*Dec.* 13. Occultation of 20 Ceti; magnitude 4·9. The disappearance takes place at 3*h*. 57*m*. *aft*., 142° from the vertex; the reappearance at 4*h*. 44*m*. *aft*., 221° from the vertex.

*Dec.* 15. Occultation of $\xi^2$ Ceti; magnitude 4·3. The disappearance takes place at 2*h*. 55*m*. *aft*., 132° from the vertex; the reappearance at 3*h*. 47*m*. *aft*., 258° from the vertex.

*Dec.* 18. Occultation of $\delta^1$ and $\delta^2$ Tauri; magnitudes 3·9, 4·2, respectively. The disappearances take place at 0*h*. 53*m*., *morn*., 2*h*. 9*m*. *morn*., 117°, 38° from the vertex, respectively; the reappearances at 1*h*. 18*m*. *morn*., 3*h*. 18*m*. *morn*., 151°, 221° from the vertex, respectively.

*Dec.* 20. Mean time of Sun's semidiameter passing the meridian, 1*m*. 11″0.

*Dec.* 29. Occultation of 80 Virginis; magnitude 5·8. The disappearance takes place at 7*h*. 47*m*. *morn*., 163° from the vertex; the reappearance at 8*h*. 36*m*. *morn*., 233° from the vertex.

*Dec.* 30. Occultation reappearance of B.D. − 8° 3737; magnitude 6·0. The reappearance takes place at 3*h*. 0*m*. *morn*., 341° from the vertex.

In this month the Mornings decrease 23*m*., and the Afternoons increase 5*m*.

MORNING AND EVENING STARS.

☿ MERCURY is a morning star, rising S.E. by E.

♀ VENUS is an evening star, setting S.W. At greatest distance from Sun on the 12th, at 4h. morn. In conjunction with Uranus on the 12th, at 10h. 9m. morn. ♀ 0° 59′ S.

♂ MARS in Aquarius. Sets about 10h. 40m. aft., W. by S.

♃ JUPITER rises in the evening, N.E. by E. Stationary on the 1st, at 9h. morn.

♄ SATURN souths in the early evening. Almost stationary in the eastern portion of Aquarius.

On the 1st of December, at midnight, the constellations Camelopardus, Taurus, and Eridanus will be on the meridian.

In Taurus is a fine Nebula of a pearly white colour 1½° North-west of ζ Tauri. Lord Rosse compared its appearance to that of a crab, and it is generally known as the "Crab Nebula."

About the middle of December Orion souths at midnight, and can be best observed in this month.

This magnificent constellation contains the grandest of all the Nebulæ, situate in the Sword-Scabbard. A line drawn from α Orionis through ζ, the third star of the belt, will pass over θ Orionis and the Nebula. It can be seen with the naked eye on any clear night. Evenings before and after the 4th of the month, and again at the end, are the best for observing it.

# Perpetual Calendar

## FROM THE COMMENCEMENT OF THE CHRISTIAN ERA.

**By which the day of the week of any day of any year can easily be ascertained.**

By Colonel F. W. M. SPRING, *late* Royal Artillery.

*RULE.—To the day of the Month, add Factors for Month, Century, and Year, and divide the total by 7.*

If there is no remainder, the day is Sunday.
If 1 is the remainder ,, ,, Monday.
,, 2 ,, ,, Tuesday.
,, 3 ,, ,, Wednesday.
,, 4 ,, ,, Thursday.
,, 5 ,, ,, Friday.
,, 6 ,, ,, Saturday.

Should the total be less than 7, it is to be taken as a remainder.

EXAMPLE.

Date of the Battle of Waterloo 18 June, 1815.

| Day. | Month. | Century. | Year. | |
|---|---|---|---|---|
| 18 | + 6 | + 0 | + 4 | = 28 |

28 divided by 7 leaves *no* remainder, therefore the day was *Sunday*.

## WITH THE RISE OF TIDE AT SPRINGS AND NEAPS.

THE TIME OF HIGH WATER *at the undermentioned Ports and Places may be approximately found by taking the Time of High Water at London Bridge, and adding to or subtracting therefrom the quantities annexed.*

NOTE.—The time thus found will be Greenwich Time for British, Belgian and Dutch Ports; Dublin Time for Irish Ports, and Paris Time for French Ports.

EXAMPLE 1.—Required the time of high water at Aberdeen on *January 9th*:—

Time of high water at London Bridge *8h. 32m.* Morn.
Subtract tide interval ..... 0 50

Time of high water at Aberdeen ..... 7 42 Morn.

EXAMPLE 2.—Required the time of high water at Scarborough on *the same 11th*.

Time of high water at London Bridge *10h. 55m.* Morn.
Add tide interval ..... 2 15

Time of high water at Scarborough .. 1 10 After.

If from the given time the "tide interval" is to be subtracted a greater than the quantity from which it has to be taken, in which case 12 hours must be added to the London Bridge time; the resulting difference will be the preceding day's afternoon tide where the London morning tide was used. Sometimes the sum "high water at London Bridge" + "tide interval" will exceed 12 hours; in this case, the excess will be the time of high water after the noon or midnight following, according as the London high water was either morning or afternoon.

EXAMPLE 3.—Required the time of high water at Aberdeen, *January 13th aft.*:—

| | | |
|---|---|---|
| Time of high water at London Bridge on *January 13th* + 12 hours ..... | *12h* | *34m.* M |
| Subtract tide interval ..... | 0 | 50 |
| | | 28 |
| Time of high water at Aberdeen, *Jan. 13th* | 11 | 44 Aft. |

# Standard Time.

It is well known that the "time of day" differs everywhere except in places on the same meridian, the difference in local times being caused by the rotation of the Earth on its axis from West to East in each twenty-four hours; and as the globe is divided astronomically into 360° of longitude, reckoned by us from the meridian of Greenwich, 180° to the East and 180° to the West, it is easily seen that each 15° is equal to one hour of time.

The notice, "London (Greenwich) time observed at all stations," so familiar to the travellers by railway, was really the introduction to the use of *Standard Time*, and was inevitable when railway time-tables were printed; but in a country so large as the Dominion of Canada, which extends over 80° of longitude, as also in the United States with nearly 60°, it soon became absolutely necessary to minimise the great inconvenience, and so the use of Standard Time was made legal.

By *Standard Time* is meant that the hour of each 15° of longitude becomes the local mean time for the zone or belt extending 7½° on each side of the central meridian; though in practice the zone has to be adapted to local circumstances, and so cannot conform to the exact line or meridian, but is arranged to suit boundaries of States or Provinces as may be most convenient. By way of illustration, it may be noted that in the Province of Ontario, Canada, by Act of the Legislature, the hour of 75° W. is Standard Time for the Province as far as 80° W., and that the S.W. point, 83° W., extends westerly beyond the eastern part of the State of Michigan, where the time of 90° W. is used; so at Windsor, Ontario, it is noon while in Michigan—more to the east—it is 11 A.M. The *Standard Time* as used in the chief cities of Canada and the United States may be noted: at Quebec, Montreal and Toronto, at Boston, New York and Washington, the time of 75° W., five hours earlier than Greenwich, is used; at Winnipeg in Manitoba, and at Detroit, Chicago and New Orleans, the time of 90°, six hours earlier than Greenwich, is used; at Regina and Denver it is the time of 105°, seven hours earlier than Greenwich; and in British Columbia and at San Francisco the time of 120° W., eight hours earlier than Greenwich, is used; and when 180° is reached another day begins in Eastern Siberia, at the Fiji Islands, and a little to the east of New Zealand.

The same rule applies to places east of Greenwich, where, of course, noon is earlier than at Greenwich according to the longitude. Spain adopted Standard—that is, Greenwich—Time early in the century. When noon at Greenwich it is 2 P.M. in Egypt and South Africa; it is 6 P.M. at Calcutta, 90° E.; in Japan, 135° E., it is 9 P.M.; and in Eastern Australia, 150° E., it is 10 P.M.

The question has been asked very often, "Where does a day begin?"—that is, any special day, New Year's Day or Easter Day—and the answer is that for all peoples, nations, and languages, using maps with longitude East and West from Greenwich, each day begins at the meridian of 180°, slightly east of New Zealand in the South, and intersecting Eastern Siberia in the North, and so the last day of the nineteenth century and the first day of the twentieth were on the Earth together, not running concurrently or side by side, north and south of the Equator, as has been supposed, erroneously, but the latter following the former from 180° westerly to Greenwich, and on again to 180°, where it gave place to January 2nd.

## Julian Calendar.

In the Roman (Julian) Calendar the months corresponded exactly with our own, excepting that down to the time of the great Emperor Augustus, the fifth and sixth months of the year—which, with the Romans, began with March—were called Quintilis and Sextilis; afterwards they were named in honour of the emperors Julius and Augustus.

In reckoning the days of each month three fixed points were taken, and any particular day was said to be so many days *before* the next coming fixed day. These three points were (1) the Kalends, by which name the first of each month was known; (2) the Nones, which fell on the seventh day of the month in March, May, July, and October, and on the fifth day in each of the other months; and the Ides, which always fell eight days after the Nones.

For example, the 1st of January was the Kalends of January (*Kalendis Januariis*), the 31st of December was the day before the Kalends of January (*pridie Kalendas Januarias*); but Dec. 30th was the third day before the Kalends of January (*ante diem tertium Kalendas Januarias*), in this case both Jan. 1st and Dec. 31st being included in the reckoning. And so on back to Dec. 14th, which was the nineteenth day before the January Kalends (*ante diem undevicesimum Kal. Jan.*), Dec. 13th being *Idibus Decembribus*, the Ides of December. In Leap-year, both Feb. 24th and Feb. 25th were known as the sixth day before the March Kalends, being distinguished respectively as *prior* and *posterior*.

In the year 1907 there will be two Eclipses of the Sun, two of the Moon, and a transit of Mercury across the disc of the Sun.

I. A Total Eclipse of the Sun, January 14, invisible at Greenwich. Begins on the Earth generally at *3h.* 53*m.* morn., in longitude 46° East of Greenwich, and latitude 28° North. Central Eclipse begins generally at *5h.* 13*m.* morn., in longitude 42° East of Greenwich, and latitude 50° North. Central Eclipse ends generally at *6h.* 58*m.* morn., in longitude 131° East of Greenwich, and latitude 57° North. Ends on the Earth generally at *8h.* 18*m.* morn., in longitude 132° East of Greenwich, and latitude 35° North.

A Partial Eclipse is visible at Madras and Hong Kong.

| At Madras— | | |
|---|---|---|
| Begins | *9h.* 47*m.* morn. | Madras Mean Time. |
| Greatest Phase | *11h.* 2*m.* morn. | |
| Ends | *0h.* 23*m.* aft. | |
| At Hong Kong— | | |
| Begins | *1h.* 29*m.* aft. | Hong Kong Mean Time. |
| Greatest Phase | *2h.* 42*m.* aft. | |
| Ends | *3h.* 45*m.* aft. | |

At Madras, the first contact occurs at 352° from the vertex, and the last contact at 45° from the same point, counting towards the East. At Hong Kong, the first contact occurs at 263° from the vertex, and the last contact at 349° from the same point, counting towards the East. Nearly one-half of the Sun will be eclipsed at both places.

II. A Partial Eclipse of the Moon, January 29, invisible at Greenwich.

| | |
|---|---|
| First contact with Shadow, *0h.* 6*m.* aft. | Mean Time at Greenwich. |
| Middle of the Eclipse *1h.* 38*m.* aft. | |
| Last contact with Shadow, *3h.* 10*m.* aft. | |

The first contact with the Shadow takes place at 137° from the North point of the Moon's limb, and the last contact at 242° from the same point, counting towards the East. Taking the Moon's diameter=1, the magnitude of the Eclipse=0·72.

III. An Annular Eclipse of the Sun, July 10, invisible at Greenwich. Begins on the Earth generally at *0h.* 35*m.* aft., in longitude 80° West of Greenwich, and latitude 21° South. Central Eclipse begins generally at *1h.* 53*m.* aft., in longitude 102° West of Greenwich, and latitude 35° South. Central Eclipse ends generally at *4h.* 56*m.* aft., in longitude 17° West of Greenwich, and latitude 37° South. Ends on the Earth generally at *6h.* 14*m.* aft., in longitude 13° West of Greenwich, and latitude 24° South. The line of Central Eclipse passes across South America from West to East at about 18° South latitude.

IV. A Partial Eclipse of the Moon, partly visible at Greenwich, July 25.

| | |
|---|---|
| First contact with Shadow, *3h.* 4*m.* mrn. | Mean Time at Greenwich. |
| Middle of the Eclipse *4h.* 22*m.* mrn. | |
| Last contact with Shadow, *5h.* 41*m.* mrn. | |

The first contact with the Shadow occurs at 41° from the North point of the Moon's limb, and the last contact at 305° from the same point, counting towards the East. Taking the Moon's diameter = 1, the magnitude of the Eclipse will be represented by 0·62. The Moon sets at Greenwich at *4h.* 10*m.* morn., 12*m.* before the middle of the Eclipse.

V. A Transit of Mercury across the Sun's disc, November 14, visible at Greenwich.

| | *h.* | *m.* | *s.* | |
|---|---|---|---|---|
| External contact at Ingress, | 10 | 23 | 40 | mrn. Mean |
| Internal contact at Ingress, | 10 | 26 | 18 | mrn. Time at |
| Internal contact at Egress, | 1 | 47 | 17 | aft. Green- |
| External contact at Egress, | 1 | 49 | 58 | aft. wich. |

The Ingress occurs at 62° from the North point, and the Egress at 345° from the same point, counting towards the East.

### VI. Eclipses of Jupiter's Satellites.

The following table contains *all* the Eclipses of the first Satellite, and *those only which are visible at Greenwich* of the second, third, and fourth Satellites.

The Roman numerals indicate the Satellite eclipsed; the letters D. and R. signifying respectively Disappearance and Reappearance. Those Eclipses which are visible at Greenwich have an asterisk after the D. or R. in the second column.

At the beginning of the year, and until July 16, the disappearances and reappearances will take place on the Eastern side of the Planet; and from July 16 to the end of the year on the Western side. As the astronomical telescope inverts the image, the disappearance will, in the former case, take place on the right hand of the image in the field of view, and in the latter on the left hand.

The mean time for any other place than Greenwich may be found by applying to the times given in the following table the difference of longitude, adding if the longitude of the place is *East* of Greenwich, and subtracting if *West*.

α Orionis, magnitude ranges from 1·0 to 1·4.

## EXPLANATION OF THE ASTRONOMICAL TABLES.

*Mean Right Ascension.*

The Mean Right Ascension and Declination for any other year may be found from this table by multiplying the annual precession by the number of years elapsed, and applying the result to the quantities given in the table. If the required date be earlier than 1907, the *signs* of the annual variations must be changed. In applying the corrections, to reduce to any other date, to the Declinations, it must be borne in mind that N. Declination means + and S. Declination −, and that the corrections must be added *algebraically*.

*Configuration of Jupiter's Satellites.*

This column exhibits, at the particular hour mentioned, the respective position of Jupiter and his Satellites as seen in an inverting telescope. The white circles represent the Planet, and the numerals 1, 2, 3, and 4 the respective Satellites: a black circle is intended to show either that the Satellite whose numeral it stands in the place of is in the shadow of the Planet (eclipsed) or else is behind the disc of Jupiter (occulted); the sign ☌ indicates that the Satellite in question is *on* the disc of the Planet.

*Sidereal Time at Mean Noon.*

This column indicates the Sidereal Time at Mean Noon on each day of the year, and is the time which the Observatory or astronomical clock should show when the Mean Time clock points to Noon, and, in connection with the table in the Appendix, serves to convert Sidereal into Mean Solar Time.

*Mean Time at Sidereal Noon.*

This column indicates the time which should be shown by the Mean Time clock when the first point of the sign Aries is on the meridian, or, in other words, when it is Sidereal Noon, and is useful for changing

Mean Solar into Sidereal Time with the help of the table in the Appendix.

Following the Phases of the Moon on the first page of each month there will be found, as well as the *times* of Apogee and Perigee, the corresponding distances from the Earth to the nearest 100 miles.

The mean distance of the Moon from the Earth is 238,840 miles.

Under the head "Eclipses, Occultations, and other Celestial Phenomena," in each month, will be found the "Mean Time of the Sun's Semidiameter passing the Meridian" for the 5th and 20th days. This will be useful in determining time by the Dipleidoscope or similar instrument, when, from the interference of clouds, &c., only one limb of the Sun is observed. From the values on the 5th and 20th, that for any other day can be easily inferred with sufficient accuracy, the change in the apparent diameter being very slow.

$\alpha^1$ Herculis, magnitude ranges from 3·1 to 3·9. $\beta^1$ Lyræ, magnitude ranges from 3·4 to 4·5.

α Centauri.

It is supposed that this star, one of the brightest in the Southern Hemisphere, is the nearest of the fixed stars to the Earth. Dr. Gill gives to it a parallax of 0·75″, which would make its distance from the Earth 275,000 times that of the Sun. At the rate at which light travels through space, it would require four years and four months to reach the Earth from this star.

Standard Time, referred to the meridian of Greenwich, has been adopted for railways and other purposes in the countries mentioned in the following table:—

| Place. | Central Meridian. | Fast or slow on Greenwich time. |
|---|---|---|
| Mid-Europe | 15° E. | ..... 1*h.* fast. |
| British South Africa | 30° E. | ..... 2*h.* fast. |
| *America.* | | |
| Inter-colonial | 60° W. | ..... 4*h.* slow. |
| Eastern | 75° W. | ..... 5*h.* slow. |
| Central | 90° W. | ..... 6*h.* slow. |
| Mountain | 105° W. | ..... 7*h.* slow. |
| Pacific | 120° W. | ..... 8*h.* slow. |
| *Australia & Japan.* | | |
| West Australia, Japan, South Australia, Victoria, New Sth. Wales, Queensland, Tasmania | 120° E. / 135° E. / 142½° E. / 150° E. | ..... 8*h.* fast. / ..... 9*h.* fast. / ..... 9½*h.* fast. / ..... 10*h.* fast. |
| New Zealand | 172½° E. | ..... 11½*h.* fast. |

The meridian 30° E., 2*h.* fast on Greenwich, has been adopted in Egypt. Greenwich Time came into use in Spain at the beginning of the century. In the Colony of Seychelles the meridian 60° E., 4*h.* fast on Greenwich, has been adopted as the Standard Time.

## ASTRONOMICAL DEFINITIONS.

THE time used throughout this Almanack, with the one exception of that of High Water at Dublin, is Greenwich Mean Time, or the time which should be shown by a well-regulated clock; the column headed "Sun before or after Clock" gives the difference between mean and apparent time, or the time as shown by the Sun.

*Conjunction.*—A Planet is said to be in Conjunction with another body when it has the same longitude, and is seen in the same direction in the heavens. It is obvious that in the case of the inferior Planets this Conjunction will be of two kinds—the one when the Planet is between the Earth and the Sun, called *inferior* Conjunction; and the other when at the opposite point of its orbit, with the Sun between the Planet and the Earth, called *superior* Conjunction. The latter is the only kind of Conjunction that can happen to the *superior* Planets, Mars, Jupiter, Saturn, Uranus, and Neptune; the *inferior* Planets, Mercury and Venus, being subject to both kinds.

*Opposition.*—A Planet is said to be in Opposition when it is distant from the Sun 180° of longitude, at which time it is most brilliant, souths about midnight, and is, generally, at its least distance from the Earth.

*Elongation.*—The inferior Planets in their revolutions round the Sun, appear to an observer on the Earth to swing pendulum-like from side to side, being alternately east and west of the Sun; the greatest Elongation is the termination of one of the swings, either east or west; and at these times the Planet appears, when viewed through a telescope, like the Moon in her first quarter if the Elongation be in the east, and like her last quarter if west. Both Mercury and Venus exhibit these phases, passing from new to full while moving from inferior to superior Conjunction, and from full to new again while passing from superior to inferior Conjunction.

*Occultation.*—It often happens that the Moon in her orbital motion passes before, and hides from a spectator on the Earth, certain of the Fixed Stars, and occasionally one or other of the Planets; these occurrences are called *Occultations*. Among the "Celestial Phenomena" are given the times at which certain of these Occultations take place, as well as the exact point on the Moon's limb where the observer is to look for the phenomenon; this point is reckoned from the true vertex, or highest upper portion of the Moon's image, counting continuously towards the East from 0° to 360°. The disappearance always takes place on the left-hand side of the Moon, and the reappearance on the right, but *vice versâ* when viewed through an inverting or astronomical telescope. Stars to the sixth magnitude only have been included in this summary.

*Southing.*—The *Time of Southing* is the time at which the heavenly bodies pass the Meridian, and is so called because they are then due south. The Meridian being a great circle passing through the Pole and Zenith of the place, the southing will also be the time when they attain their greatest altitude above the horizon.

# The Peerage.

In a broad sense this heading is commonly taken as identical with the one that follows; but there are close upon 130 holders of titles of long-standing nobility who are not members of the Upper House of Parliament, their peerages being those of Scotland or Ireland only. But, as further explained below, there are about an equal number of Peers of those kingdoms who possess additional titles which constitute them members of the Lords, these titles being in a majority of instances, though very far from all, inferior to those by which they are generally known. A considerable complication is the result, but to lessen the trouble of reference we have now arranged all Peers of the same rank under a single alphabet for that rank, distinguishing every Peer whose title is Scottish or Irish, and also such of these as possess Imperial titles in addition. The full details as to each are given under his leading title, and a reference is in every case supplied under any other that he may hold, so that the table of equivalent titles formerly given in this work is no longer needed: a double index will be found in "WHITAKER'S PEERAGE, BARONETAGE, KNIGHTAGE AND COMPANIONAGE," pages 36–7.

## THE HOUSE OF LORDS,

the *Magnum Concilium* of the early chroniclers, consists of the Spiritual Lords of England (the 2 Archbishops and 24 of the Bishops), the Temporal Peers of England, Great Britain, and the United Kingdom, and of Representative Peers of Scotland and Ireland, together with such Scottish and Irish Peers as have also Imperial titles. No Peer can take his seat if he be under age, of unsound mind, or bankrupt. The *full* Assembly would consist of 3 Princes of the Blood Royal, 2 Archbishops, 22 Dukes, 23 Marquesses, 124 Earls, 40 Viscounts, 24 Bishops, 336 Barons, and 16 Scottish and 28 Irish Representative Peers: total 618. See WHITAKER'S PEERAGE, page 18, for complete table, showing numbers of Life Peers, Minors, &c. There are also 12 Ladies who are Peeresses in their own right, whose titles and names, along with those of Scotland, are given below at page 100. Female succession may occur in the Imperial Peerage in any Barony of England which was conferred by writ of summons; but it is subject to the rule of *abeyance* whenever there are more than one daughter, sister, &c., eligible to succeed. There are also a few cases in which "special remainders" have been granted to female relatives in the absence of males. We use the term "Imperial" as including the three series of Peers of "England" (up to June 20, 1707), "Great Britain" (thence till close of 1800), and "United Kingdom" (1801 onward).

## SCOTTISH AND IRISH PEERS.

There are in all 87 Scottish Peers and 175 Irish, but of the total 262 there are 133 possessing Imperial titles and 129 without them. Of the 87 Scottish, 51 have Imperial titles and 16 are elected or re-elected every Parliament to sit in the Lords; and similarly of the 175 Irish 82 hold Imperial titles, and 28 are elected for life. Of the Imperial titles of the two kingdoms there are 76 which are inferior to the native ones, 30 are superior, 12 are identical in rank but differing in designation, and 15 are absolutely the same. Of the 3 Scottish Peeresses cited on page 100, that of Melfort is subject to a degree of doubt, so that the lady does not assume it. There are other lines in the Scottish Peerage which are open to female succession, and this is not subject to abeyance as in England. In the Irish Peerage, on the other hand, the only titles open to female succession are the Massereene Viscounty and the 1a Poer Barony, the latter now held by the Marquess of Waterford. It will be observed that Ireland possesses a great advantage over Scotland in the Lords as it does in the Commons, its native Peers who hold Imperial titles numbering, as just stated, 82 as against 51 of Scotland, and its elected Representative Peers 28 as against 16. An Irish Peer who holds no Imperial title has also the special privilege of being able to seek election to the Commons for any constituency not in Ireland itself.

*Contractions.—S.* or *I.* appended to the date of creation denotes a *Scottish* or *Irish* title; the further addition of a * implies that the Peer in question holds also an Imperial title, which is specified (after the name) by its more definite description as *Engl.*, *Brit.*, or *U.K.* When both titles are alike, as in the case of Argyll, this star is appended to the conjoined date below, and it then denotes that such date is that of the Imperial creation. A † appended to *S.* or *I.* implies that the Peer is an elected Representative to the House of Lords. For the mark ~ see heading to Marquesses; *b.* signifies born; *s.*, succeeded; *m.*, married; *w.*, widower or widow; *div.*, divorced; *M.*, minor.

Women take the same rank as their husbands or as their eldest brothers; but the daughter of a Peer marrying a Commoner retains her title as Lady or Honourable. Daughters of Peers rank next immediately after the wives of their elder brothers, and before their younger brothers' wives. Daughters of Peers marrying Peers of lower degree take the same order of precedency as that of their husbands; thus the daughter of a Duke marrying a Baron degrades to the rank of Baroness only, while her sisters married to commoners retain their rank and take precedence of the Baroness. Merely official rank on the husband's part does not give any similar precedence to the wife. For fuller tables see "WHITAKER'S PEERAGE, BARONETAGE, KNIGHTAGE AND COMPANIONAGE," pp. 72-73.

---

There are three Orders confined to Ladies: The Order of Victoria and Albert, the Crown of India, and the Royal Red Cross. But members are entitled to no special precedence.

---

LOCAL PRECEDENCY. — No written code of county or city order of precedence has been promulgated, but normally in the county the Lord Lieutenant stands first, and secondly the Sheriff. In London and other Corporations, the Mayor stands first, after him the Aldermen, Sheriff, Chief Officers and Livery. At Oxford and Cambridge the High Sheriff takes precedence of the Vice-Chancellor.

# The House of Commons.

THE constitution of Parliament, as it now exists, dates back almost eight centuries, to the time of King John and Magna Charta. In this document there is a provision that "no scutage or aid shall be imposed in our realm save by the Commune Concilium of the realm," and to this Council were to be summoned the Prelates and Greater Barons individually, and the Lesser Barons and Tenants-in-chief collectively. From this groundwork the National Assembly has grown up through the reigns of the various Sovereigns until it has assumed its present shape. The principal landmarks of this growth are, the summons of citizens from Boroughs by Simon de Montfort, the assumption of the maxim "Grievances precede supply," under the Tudors and Stuarts; and the appearance of a Prime Minister, with the Sovereign's desuetude of presiding at Cabinet meetings, under the House of Hanover.

The representation in the Commons varied considerably until 1885, since which date it has stood at 670:—465 members from England, 30 from Wales, 72 from Scotland, and 103 from Ireland. Previous to the Union with Scotland, in 1707, the House consisted of only 513 members; in that year 45 were added to the new Kingdom. In 1801, when Ireland became part of the Kingdom, 100 members were added, and in 1832 the Reform Act raised the representation of Ireland to 105, and that of Scotland to 53. Between this date and 1885 the Irish representation was reduced to 103 by the disfranchisement of the Boroughs of Cashel and Sligo for corruption, and 7 members were added for Scotland in 1867. Many of the old abuses have been swept away by the different Acts of Reform, but much confusion still remains in the nomenclature of the various divisions and sub-divisions of the constituencies, and the proportionate representation of the three kingdoms grows annually less exact by the increase of population and electors in England and Scotland and their decrease in Ireland.

The allotment of members to the great divisions of the United Kingdom is shown in the following table, which also presents a view of the balance of parties as returned by each division at the General Election of 1906:—

| | Distribution of Members. | | | | Position as to Parties (1906). | | |
|---|---|---|---|---|---|---|---|
| | Counties. | Boroughs. | Universities. | Total Members. | Ministerial. | Opposition. | Majority. |
| England | 234 | 226 | 5 | 465 | 337 | 128 | 209 *Min.* |
| Wales | 19 | 11 | — | 30 | 30 | 0 | 30 *Min.* |
| Scotland | 39 | 31 | 2 | 72 | 61 | 11 | 50 *Min.* |
| Ireland | 85 | 16 | 2 | 103 | 84 | 19 | 65 *Min.* |
| United Kingdom | 377 | 284 | 9 | 670 | 512 | 158 | 354 *Min.* |

The two parties were thus made up: of Ministerialists, 512 (387 Liberals; 84 Nationalists and 41 Independent Labour Members); Opposition, 158 (Conservatives and Unionists).

The letters after the names are—*L.* Liberal, *N.* Nationalist, *Lab.* Independent Labour Party, *S.* Socialist, *C.* Conservative and Unionist. Members of the late Parliament have a * prefixed, while § denotes a change of constituency.

The figures placed after the names of constituencies give the number of electors on the register in the year 1906; the figures after the names of candidates represent the votes polled at the General Election (unless otherwise stated); members are printed in italics.

The total number of electors upon the register in 1906 is given below, together with the Registrar-General's estimate of the population in the middle of the year 1906: the table further showing the proportion borne by the Representatives and by the Electorate to each other, and to the Population.

| | England and Wales. | | Scotland. | | Ireland. | | United Kingdom. | |
|---|---|---|---|---|---|---|---|---|
| | Total. | Per Member. | Total. | Per Member. | Total. | Per Member. | Total. | Per Member. |
| Electors (1906) ... | 5,824,884 | 11,767 | 750,401 | 10 422 | 691,423 | 6,712 | 7,266,708 | 10,845 |
| Population (1906) | 34,547,016 | 69,971 | 4,726,070 | 65,639 | 4,386,035 | 42,582 | 43,659,121 | 65,162 |

At the time of going to press there was a vacancy at Worcester City (*C.*).

(*Elected January and February*, 1906.)

*Abbreviations*:—*L.* = Liberal; *Lab.* = Labour; *S.* = Socialist; *N.* = Nationalist; *C.* = Conservative and Unionist.

* Denotes a Member of the last Parliament, and § a change of constituency.

# Premiers, Principal Secretaries,

*Premiers and Secretaries of State.*—The illnesses of King George III., who had presided at all meetings of the Cabinet, allowed the appearance of a Prime Minister, for the Regent did not replace the Sovereign in this respect. After the Regency the Sovereign ceased to preside, and the leading Minister became, in fact, Prime Minister. In old times the Chief Minister was the Chancellor, whose office originally included, besides its legal functions, the duties now performed by certain of the Secretaries of State. The first mention of a King's Secretary of State is under Henry III. In 1433, owing to press of work in France, two Secretaries were appointed, and under Henry VIII. there were still two. Under Elizabeth we find one Secretary only in the early years of her reign, but afterwards two, and until 1794 two seems to have been the normal number; though from 1707 to 1746 we find a

third Secretary for Scottish, and from 1768 to 1782 a similar Secretary for Colonial, business. From 1688 to 1782 one of the two dealt with matters pertaining to the Northern States of Europe, the other with matters pertaining to the Southern States, Home, Irish, and Colonial business. In 1782 the former became Foreign and the latter Home Secretary, still retaining Irish and Colonial business. The Home Secretary was also responsible for the Secretary at War, who, though not a Secretary of State, directed the movements, payment, and civil control of the Army. In 1794 a Secretary of State for War was appointed to manage all military business, and in 1801 he was given the control of the Colonies. In 1854 the Secretary of State for War was relieved of Colonial business, and a fourth Secretary of State was appointed for the Colonies. In 1858 the Secretary of State for India was appointed.

## ADMIRALTY, Whitehall, S.W.

The management of all maritime affairs, the government of the Royal Navy, jurisdiction in maritime cases, and the appointment and commissioning of Naval Officers, was in early times the province of the "Lord High Admiral," the ninth Great Officer of State. The judicial functions of the office have long been vested in other hands, and the office itself has been "in commission" since 1708 (except for a short time in 1827, when the Duke of Clarence was Lord High Admiral), the duties being performed by "Commissioners for executing the Office of Lord High Admiral of the United Kingdom." These Commissioners, or "Lords of the Admiralty" as they are more generally called, consist of a Political "First Lord" (who, by virtue of the importance of his office, is a Cabinet Minister), a "First Sea Lord," "Second Sea Lord," "Third Sea Lord and Controller," and a "Fourth Sea Lord," now always selected from Officers of the Service, with a Political "Civil Lord." There is also a "Parliamentary and Financial Secretary" and a non-political Permanent Secretary. The *net* amount provided in the Navy Estimates 1906–7, for salaries, &c., of the Board and subordinate offices is £329,809.

## AGRICULTURE AND FISHERIES, Board of, 4 Whitehall Place; 3 St. James's Square, and 3 Delahay Street, S.W.

The Board of Agriculture was established by the Act of 1889, when there were transferred to it the duties of the Privy Council in connection with Diseases of Animals, and the functions of the Land Commissioners for England. Technically, the membership of the Board is analogous to that of the Local Government "Board," and "Board" of Education, but in effect the establishment consists of a President, Secretary, Assistant Secretaries, &c., and its main functions are to prevent the introduction or spread of certain diseases among animals, to collect and distribute information relating to Agriculture, Horticulture and Forestry in Great Britain, to administer the Grant voted by Parliament to the Board for Agricultural Education in England and Wales, to collect and publish agricultural statistics, to administer the Sale of Food and Drugs Acts in Great Britain so far as they relate to agricultural produce, to control the redemption of tithe rent charge and the enclosure of common land, to enfranchise copyhold land, to administer the Acts relating to the improvement of land by private owners, and to administer the Acts relating to Sea, Salmon and Freshwater Fisheries as regards England and Wales. The Board also publishes a monthly "Journal," price 4*d.* By the Board of Agriculture and Fisheries Act of 1903 certain powers and duties formerly exercised by the Board of Trade with respect to fisheries were transferred to this Department, the designation of which was at the same time altered. The Board also control the Ordnance Survey of the U.K., which is the subject of a separate Vote. By an Order in Council of 28 March, 1903, the supervision of the Royal Botanic Gardens, Kew, was transferred to the Board. The cost of administration in the financial year 1906–7 was estimated at £130,335.

## CORNWALL, DUCHY OF, Buckingham Gate, S.W.

Cornwall was created a Duchy by Edward III. for the support of his eldest son (afterwards created Prince of Wales), and the eldest son of the Sovereign has since been born Duke of Cornwall, the revenues of the Duchy accruing to the Duke. The internal government of the Duchy was amended by the Acts of 1863 and 1893, and certain peculiar juridical powers abolished. The accounts of the Duchy will be found on page 328.

## CUSTOMS ESTABLISHMENT, E.C.

Commissioners of Customs were first appointed in 1671 and housed by the King in London, the present "Long Room" replacing that built by Charles II. and rebuilt after destruction by fire in 1718 and 1814. In 1830 the Customs business of Ireland was transferred to London. The Board of Customs, consisting of a Chairman, Deputy Chairman, and a Commissioner) is one of the four great Revenue-collecting bodies, and for this purpose exacts the duties prescribed in the Finance Act of each year and pays the moneys received into the Bank of England for the Exchequer account. The revenue derived from Customs in the financial year 1905-6 amounted to £36,018,793, and the cost of collection (at the hands of Custom House officers in the various ports) to £924,600, being £70,355 for the superintending establishments, £682,399 for the port establishments, and £200,989 for superannuations, &c.

## DURHAM, COUNTY PALATINE OF.

"Palatine" privileges were granted to the Bishop of Durham by the Northumbrian Prince Guthrum and exercised by the Prelate until arrogated by the Crown in 1836. Palatine counties were erected for the defence of neighbouring kingdoms against the Welsh and Scots, and were in reality self-contained kingdoms in alliance with their creator. The ancient customs of the County Palatine of Durham are in a great measure retained, the administrative authority being exercised on behalf of the Crown.

## EDUCATION, BOARD OF, Whitehall, S.W.

The Government Department of Education was, until the establishment of a separate office, a Committee of the Privy Council appointed in 1839 to supervise the distribution of certain grants which had been made by Parliament since 1834, and consisted of the Lord President, the Secretaries of State, the First Lord of the Treasury, the Chancellor of the Exchequer, and a Vice-President. The Board of Education Act, 1899, abolished the Committee of the Council, established the Board of Education, with a President and Parliamentary Secretary, and created a Consultative Committee. The Grants towards Elementary Education (including Training of Teachers) in 1906-7 were estimated at £11,976,804; towards Secondary Education at £372,600; towards Technical Education, Colleges, Museums, &c., £565,799, and the cost of administration (including Inspection) at £432,742.

## HOME OFFICE, Whitehall, S.W.

The Secretaryship of State for Home Affairs was created in 1782, the duties having previously been assigned to the "Southern" Secretaryship, which embraced the affairs of the United Kingdom, Ireland, and the Colonies, and also Southern Europe. By the appointment of the "Home" and "Foreign" Secretaries the duties were divided in accordance with the names of the Offices, the former retaining Irish and Colonial business, and until 1794 War business also. In 1801 the Colonial business was also removed. The Home Secretary is the medium by which the Sovereign acquaints his people of his pleasure, and a channel of communication with the Sovereign, and the main functions are the maintenance of the King's peace, the enforcement of rules made for the internal well-being of the community, and the exercise of the prerogative of mercy. The administrative expenses of the Home Office were estimated at £190,085 in 1906-7.

## LANCASTER, DUCHY OF.

Office, Lancaster Place, Strand, W.C.

Lancaster was erected into a "Palatine" Duchy by Edward III. for his son John of Gaunt in 1359, but in 1399 merged into the Crown through the accession of Henry IV. Its revenues have always been kept separate, though vested in the Sovereign and his heirs. The Judicature Act has left only the Chancery Court of the Duchy, but while the Chancellor is a Political Officer of the Government, and may or may not be learned in the law, a lawyer is appointed Vice-Chancellor. The accounts of the Duchy for the year 1904–5 will be found on p. 328.

## MUSEUM, THE BRITISH,
### Bloomsbury, W.C.

The British Museum may be said to date from 1753, when Parliament granted the sum of £20,000 to purchase the collection of books, &c., of Sir Hans Sloane, the building "Montagu House" being opened in 1759. The present buildings were erected between 1823 and 1857, and the original collection has increased to its present

dimensions by gifts and purchases, and by the operation of the Copyright Act of 1842, which secures a copy of every publication for the Library. Rules, &c., affecting the public dates and times of opening, &c., will be found among "Places of Interest." The administrative expenses of the British Museum were estimated at £169,938 (including Natural History Museum) in 1906-7, and were met by a vote under "Education, Science, and Art." ## NATIONAL DEBT OFFICE,
### 19 Old Jewry, E.C.

The National Debt Commissioners were appointed under 26 Geo. III., c. 31 (1786), by which a permanent Sinking Fund was to be established, and a sum of £250,000 issued quarterly to be applied towards the reduction of the National Debt, being commonly spoken of as "Mr. Pitt's Sinking Fund." In 1829 this was superseded by appropriating the surplus income of the year as the Sinking Fund, and this is commonly known as "The Old Sinking Fund." In 1875 "The New Sinking Fund" was set up by Sir Stafford Northcote (38 Vic., c. 45), and this, with the Old Sinking Fund, now mainly operates in reducing the Debt. The Commissioners are at the present time the Speaker, the Chancellor of the Exchequer, the Master of the Rolls, the Lord Chief Justice, the Paymaster-General, and the Governor and Deputy-Governor of the Bank of England. The administrative expenses of the Board were estimated at £13,348 in 1906-7.

## NATIONAL GALLERY, BRITISH ART
### (The Tate Gallery), Millbank, S.W.

The National Gallery of British Art, better known as "The Tate Gallery," was opened in 1897 on the site of Millbank Gaol, the cost of erection (£80,000) being borne by Sir Henry Tate, who also contributed the nucleus of the present collection. The administrative expenses were estimated at £2,041 in 1906-7.

*Director*, Sir Charles Holroyd ..... *(see above)*
*Keeper*, D. S. MacColl ..... £350 to £500

## NATIONAL PHYSICAL LABORATORY,
Bushy House, Teddington.

The National Physical Laboratory, founded in 1899 for standardising and verifying instruments, for testing materials and for the determination of physical constants, is controlled by a Board representing the Royal Society and the great Technical Societies. In addition to capital sums, an annual grant of £6,000 is contributed by H. M. Treasury; and subscriptions from the Technical Societies and other sources amount to about £1,850 a year. The Kew Observatory now constitutes one department of the Laboratory; and there are also departments for Physics, Engineering, and Metallurgy. The Physics Department comprises Thermometric, Electrical, Metrological, and Optical Divisions.

*Chairman*, The President of the Royal Society.
*Do. of Executive Committee*, Lord Rayleigh, O.M., F.R.S.

## PATENT OFFICE (Hours 10 to 5),
25 Southampton Buildings, W.C.

The prerogative of the Crown to grant monopolies was limited by 21 James I. c. 3 to the grant of Letters Patent for New Inventions, and the control of such grants was transferred to the Board of Trade by 46 & 47 Vict. c. 57. The duties are performed by a Comptroller-General with a staff of officials. The administrative expenses were estimated at £99,299 in 1906-7.

## POST OFFICE.

### Chief Office, St. Martin's-le-Grand, E.C.

A House of Commons report in 1844 states: "It is uncertain at what precise period the Crown undertook to be the regular carrier of letters for its subjects." The first "Master of the Posts" was appointed in 1516, but the duty was not then undertaken as a remunerative department of the Government. The Post Office is now one of the three great revenue-collecting departments, and, while efficiently discharging its multifarious duties, shows an annual profit of about £4,000,000, and also collects a large sum for the Inland Revenue Department. The Penny Post was inaugurated in 1840, the Book Post in 1848, the Post Office Savings Bank in 1861, the Post Office Telegraphs in 1868, the Money Order Office in 1792, Postal Orders in 1883, the Parcel Post in 1883, and the Telephone Service in 1892. The administrative expenses of the Post Office were estimated at £16,745,741 in 1906-7, viz.: Postal Services, £11,002,736; Packet Services, £731,094; Telegraph Services (including Telephone Services), £4,922,921. A "Postal Guide," containing the Rates, Rules and Regulations, will be found on pp. 464-70.

## QUEEN ANNE'S BOUNTY, 3 Dean's Yard, S.W.

Incorporated in 1704, when Queen Anne, with the consent of Parliament, transferred to the Governors the annual income of the "first fruits" and "tenths" derived from the sees, dignitaries, and benefices, with a view to the augmentation of insufficiently endowed livings. These charges were originally levied on all clerical incomes and paid to the Pope, but were made part of the Crown revenue by Henry VIII. More than half of the benefices in England and Wales are free from these charges, having either been exempted from them by statute or formed since the charges were imposed. "First fruits" represent one year's income of a benefice in the time of Henry VIII.; the "tenths" an annual sum of a tenth part of that income. The income from this source amounts to about £15,000 per year, which, with the surplus income from capital held by the Governors, is distributed in grants to meet benefactions awarded to benefices not exceeding £200 in net annual

value. The total amount distributed in 1905 was about £27,212. The Governors act as trustees for endowments and many descriptions of Church funds. They are also empowered to lend money upon mortgage of benefices for improvements to parsonage houses and farm buildings, in certain cases for rebuilding chancels, and for dilapidations.

## TREASURY, Whitehall, S.W.

The Lord High Treasurer of England is the Third Great Officer of State, the office having been "in commission" (with certain intervals) since 1612. The Commissioners for executing the office of Treasurer of the Exchequer of Great Britain and Lord High Treasurer of Ireland consist of the First Lord, who, if a Commoner, is, *ex officio*, Leader of the House of Commons, the Chancellor of the Exchequer, and some Junior Lords, with certain Secretaries and a staff of officials. The duties of the First Lord are mainly political, as also are those of the Junior Lords; the duties of the Chancellor of the Exchequer are mainly financial, in that he performs the financial duties of the Under-Treasurer and, after agreement with the heads of the great spending departments, arranges for the great collecting departments to provide sufficient moneys to meet the needs of the year. The papers are laid before Parliament in the form of a Budget, which the Chancellor expounds to the House. These plans being accepted, modified, or rejected by the House. The administrative expenses were estimated at £99,911 in 1906-7.

## TRINITY HOUSE, Tower Hill, E.C.

Trinity House, the first General Lighthouse and Pilotage authority in the kingdom, was a body of importance when Henry VIII. granted the institution its first charter in 1514, *inter alia* "for the relief, increase and augmentation of the Shipping of this Realm of England." Since that period the duty of erecting and maintaining lighthouses and other marks and signs of the sea has by Royal Charter and Acts of Parliament been entrusted to this Corporation. Until 1854 all light dues were collected by Trinity House, and until 1874 Masters of the Navy were examined by the Elder Brethren. The present duties of the Elder Brethren have reference to Pilotage, Lighthouses, Buoys, Beacons, &c., and attendance at the Admiralty Court to act as assessors, also to advise the Board of Trade in nautical matters. There are 13 Acting Elder Brethren, of whom 2 are elected from the Royal Navy and 11 from the Merchant Service; there are also 11 Honorary Elder Brethren. The income of the Corporation derived from light dues levied on shipping entering and leaving British ports amounts to £300,000 per annum, which is expended in the maintenance of the Lighthouse and coast-marking system of England and Wales, under the financial control of the Board of Trade. The Corporation also administers certain charitable trusts specifically dedicated to the relief of decayed master mariners and their widows, the accounts in respect of which are rendered to the Charity Commissioners.

## WAR OFFICE, Whitehall, S.W.

A Secretary of State for War was first appointed in 1794, the control of the Land Forces of the Crown having been previously exercised by a Secretary at War, who was responsible to Parliament through the Home Secretary. In 1801 the Secretary of State for War was also given the business of the Colonies, of which he was relieved in 1854 by the appointment of a Secretary of State for that purpose. In 1904 an Army Council was created by Letters Patent, and to this Council were thereby transferred all the powers exercised under the Royal prerogative by the Secretary of State for War and the Commander-in-Chief. An Order in Council of the same year fixed the distribution of duties among the members of the Army Council. The administrative expenses of the War Office were estimated at £559,000 in 1906-7.

## MEMBERS OF CONVOCATION.

In theory the Church of England is governed by means of its Convocations of Bishops and Clergy: there is a House of Convocation for each province, Canterbury and York. Each Convocation consists of two Houses, the upper confined to the archbishops and bishops, the lower composed of the dean of every cathedral, the archdeacons, with proctors elected from every cathedral chapter, and two more elected by the clergy of every diocese in the province of Canterbury, and by every archdeaconry in the province of York. A fresh election is made with every new Parliament.

### GENERAL SYNOD.

Consisting of House of Bishops (13) and House of Representatives (viz., 208 clerical and 416 lay).

*Honorary Secretaries*, Ven. J. George Scott, D.D.; Ven. Wm. Colquhoun, B.D.; Sir J. C. Meredith, LL.D.; Capt. R. Wade Thompson.

*Secretary to the* Representative Church Body (incorporated 1870), T. Greene, M.A., 52 St. Stephen's Green E., Dublin.

By the Act of Union, 1800, the Church of Ireland was united with the Church of England, and the Sovereign, as one of its members, supreme governor on earth. By the Act of 1869 this union was severed, and on Jan. 1, 1871, the Church of Ireland resumed her independent position. The Act of 1869 not only disestablished the Irish Church, but also took away her endowments, nothing being left but the right to the life services of the Annuitant Bishops and Clergy (which were commuted for a capital sum), the right to claim churches in use for divine service, the right to buy the See and Glebe Houses (with garden and curtilage), and £500,000 in lieu of private endowments.

The supreme governing body of the Church of Ireland is the General Synod, which meets annually.

Subject to the General Synod are 23 *Diocesan Synods*, which are assisted by smaller elected bodies called Diocesan Councils.

The Bishop of the Diocese is chosen by the clerical and lay members of the *Diocesan Synod*. The Primate is chosen by the House of Bishops from amongst their own number.

The incumbent of the Parish is appointed by a *Board of Nomination*, consisting of 7 persons, viz.:—The Bishop, 3 diocesan nominators (2 clerical and 1 lay) appointed by the Diocesan Synod, and 3 parochial nominators (lay) appointed by the registered vestrymen of the parish.

The financial trustees of the Church are the Representative Body, composed of the Archbishops and Bishops, 13 clergymen and 26 laymen, chosen by the Diocesan Representatives in the General Synod, with 13 co-opted members (clerical or lay). This body holds the property of the Church, and administers its funds, subject to the General Synod.

The first property it held was the capital sum £7,581,075, representing the life annuities of the Bishops and Clergy paid over as commutation money by the Church Commissioners, and also £500,000 compensation for private endowments. The commutation capital now amounts only to £691,238, charged with annuities to 150 annuitants. The funds, however, in the custody of the Representative Body amount in all to £8,650,970, made up of *Commutation* £691,238, *Parochial Sustentation* £5,294,218, *Episcopal Sustentation* £563,066, *Glebes purchase* £348,475, *Miscellaneous purposes* £1,697,727, and *Balances* £56,243.

Since 1869, members of the Church have paid in to the Representative Body a total sum of £6,343,919. The interest of the Parochial Sustentation Fund is approximately £198,533. The total amount of *assessment* for stipend paid by parishes, 1905, was £202,782, and the total amount paid for *stipends* under Diocesan Schemes was £265,873.

The number of members of the Church of Ireland, by the Census of 1901, was 581,089, or 12·0 per cent. of the entire population.

THE CHURCH OF SCOTLAND is Presbyterian in constitution, and is governed by Kirk Sessions, Presbyteries, Synods, and the General Assembly, which consists of both clerical and lay representatives from each of the Presbyteries, and also from the universities and royal burghs. It is presided over by a Moderator (chosen annually by the Assembly), and the Sovereign is represented by a Lord High Commissioner (appointed each year by the Crown), who receives the sum of £2,000, for his services. The country, for Church purposes, is divided into 16 synods and 84 presbyteries, and there are about 1,800 ministers and licentiates engaged in ministerial work. The Church population exceeds the aggregate of all the other Presbyterian bodies, and is estimated at about half the whole population of Scotland; the number of communicants in 1905 was 692,914. The sum of £503,170 was raised in 1905 for home and missionary purposes. Within the last 50 years 437 chapels, at a cost of £1,619,000, have been endowed and erected into parishes *quoad sacra*. The original parishes were 924, in addition to which there were in 1898, 405 new and 42 Parliamentary parishes, also 203 unendowed churches and 184 mission stations; a total of 1,758. The Presbyterian form of Church government as first set up in Scotland was superseded in 1662 by the Episcopal Church under the Stuarts; but at the Revolution in 1688, Presbyterianism regained the legal establishment, which it still preserves. In consequence of the action of the civil courts in certain cases of disputed settlements, confirmed by a decision of the House of Lords in 1842, about 289 parish ministers resigned their preferments, and in 1843 founded the *Free Church*.
LORD HIGH COMMISSIONER, Lord Colebrooke.
MODERATOR, 1906, Rt. Rev. T.B.W. Niven, D.D.
*Agent*, A.L. Menzies, W.S., 54 Castle St., Edinburgh.

## OTHER PRESBYTERIAN CHURCHES.

PRESBYTERIANISM HAS SEVERAL SUBDIVISIONS.

(1) *The United Free Church of Scotland* was formed by the Union on October 31st, 1900, of the *Free Church of Scotland* and the *United Presbyterian Church*. The United Church, by rearrangement of the Synods and Presbyteries, has 12 Synods and 64 Presbyteries. The Supreme Court is the General Assembly, which meets every year at the same time as that of the Established Church. In the year ending 31 Dec., 1905, there were 1,626 congregations and 33 preaching stations. The total membership exceeded 504,000, and there were 2,422 Sunday Schools, with 245,713 scholars and 26,071 teachers. In 15 Foreign Mission Fields there are 316 European Mission Agents and 3,838 native pastors, evangelists, and teachers, including in both cases those of the Women's Foreign Mission. The income of the Church at the close of last financial year amounted to £1,208,413 2s. 11d.
MODERATOR, Rev. George Clark Hutton, D.D., Paisley.—*Offices*, 1 Castle Terrace, Edinburgh.

(2) *The Presbyterian Church in Ireland.*—According to the Census of 1901, the members of the various Presbyterian churches in Ireland were 443,494. The largest of these, under the superintendence of the General Assembly, consists of 36 presbyteries, 647 ministers, 569 congregations, with 106,342 communicants, 84,600 families, 8,354 Sabbath-school teachers, and 97,647 scholars. During the year 1905-1906 this branch contributed by congregational effort £213,236 for religious, charitable, and missionary purposes. The total income for the year for all purposes was £292,265. It possesses two Colleges, with power to confer Theological Degrees, comprising a staff of 14 professors, and has 29 ministerial with 6 medical missionaries in foreign parts. MODERATOR, 1906-7, Rev. Wm. McKean, D.D., Belfast. *Clerk*, Rev. W. J. Lowe, D.D., Londonderry.

(3) *The Presbyterian Church of England* has 12 presbyteries, 344 congregations, 15 preaching stations, and 85,215 members. It has a Theological College (Westminster College, Cambridge), and supports 79 missionaries abroad, including 33 women. In 1905 the amount raised for all purposes was £304,613. MODERATOR of Synod for 1906-1907, Rev. J. B. Meharry, D.D., Crouch Hill, London. *Financial Sec.*, John Leggat, 7 E. India Av., E.C. *Publications Office*, 14 Paternoster Square, E.C.

(4) The less numerous divisions are: The *Free Church of Scotland*, consisting of those members who did not unite with the U.P. Church; the Reformed Presbyterian Synod, the Eastern Reformed Synod, the United Original Seceders, the Secession Presbytery in Ireland, and the Synod of the Church of Scotland in England.

## The Methodist Churches.

UNDER the general designation of METHODISTS are included all those religious bodies which owe their existence, directly or indirectly, to the efforts of the Revds. John and Charles Wesley. The most numerous and influential of them are—

*Wesleyan Methodists*, the original body founded in 1739 by these two brothers. While students at Oxford, in 1729, they gathered a number of young men together for purposes of study and devotion, who were nicknamed, first, "The Holy Club," and afterwards "The Methodists." In 1739 John Wesley founded the "Religious Societies," in which the first beginnings of Methodism are to be found. The number of members rapidly increased, until a more definite and extensive organisation than Wesley at first gave them was imperatively demanded. The first *Conference*, consisting of six clergymen and four laymen, was held in 1744. The conference is now composed in its Representative Session of 300 ministers and 300 laymen, with a ministerial president and secretary at its head, elected year by year. The Wesleyans are governed primarily by the Conference, secondarily by the Synods, which are semi-annual meetings of the ministers and selected laymen in each district, over which a chairman is appointed by the Conference, and by quarterly meetings of the ministers and lay officers of each circuit. The authority of both these last meetings is subordinate to the Conference, which has the supreme legislative and judicial power in Methodism. When Wesley died the number of members was 76,968, and since then the increase has been so great that about 18,000,000 people are now receiving Methodist instruction in various parts of the world. At Washington, in October, 1891, it was reported that there were more than 30,000,000 Methodists. This statement has been recently repeated by leading Wesleyans; but no evidence is forthcoming to establish its accuracy, which is more than doubtful. *Pres.*, Rev. Albert Clayton; *Sec.*, Rev. J. Hornabrook.

Various distinct bodies of Methodists have been formed, the most important being—

1. *The Methodist New Connexion*, which was formed in 1797 by the Rev. Alexander Kilham,

one of the early itinerating Wesleyan preachers. He demanded that the members of the societies, and not the Conference, should be constituted the source of all power in Methodism; and that the Conference should consist of lay as well as ministerial members, all of whom should be elected by the members of the various societies as their delegates. He was expelled by the Conference and at once founded a new community.—*President*, Rev. Joseph Foster.

2. *The Primitive Methodists*, who sprang up in Staffordshire, in 1810, under the leadership of Hugh Bourne and William Clowes. Owing to the excesses attending certain outdoor services called "camp meetings" the Wesleyan Conference prohibited the continuance of the practice. Bourne and Clowes refused to comply with this decision, and were in consequence expelled. They and their sympathisers banded together in a new body, with enlarged powers for the laity. Next to the Wesleyans they are the most numerous of all the denominations which have arisen out of the Methodist movement. — *President*, Rev. George Parkin.

3. *The Bible Christians*, founded in 1815 by William O'Bryan, a Wesleyan lay preacher in Cornwall. They exist principally in the West of England.—*President*, Rev. J. B. Stedeford.

4. *The United Methodist Free Churches*, which are an amalgamation of three different secessions —the Protestant Methodist, formed in 1828; the Wesleyan-Methodist Association, which sprang out of a controversy in 1834, concerning the training of ministers; and the Wesleyan Reform Association, founded in 1849, during a great agitation. A strong opposition to leading Wesleyan officials was organised, which found expression in the Conference debates, but more strongly in anonymous pamphlets, on suspicion of being the authors and circulators of which three ministers were expelled. They found so many sympathisers that over 100,000 members seceded to found a new denomination.—*President*, Rev. D. Irving, M.A.

*Finances.*—The *Wesleyans* raised in 1905–1906 £171,663 to sustain their very extensive missionary operations. At the same time their Home missionary income was £37,332; £437,579 were expended in Great Britain for chapel-building; and £12,196 for the training of candidates for the ministry, of whom there are 253 in the four theological colleges. By the *Methodist New Connexion* the following sums were raised: For chapel fund, £566; for missions, £4,619. The *Primitive Methodists* raised £39,489 for new chapels, and the *United Methodist Free Churches* £11,282 for their missions. During the past eight years the *Wesleyans* have been raising a Twentieth Century Fund of one million guineas to be applied to their Evangelistic Educational and Philanthropic work; the whole of this sum has now been secured.

## Other Religious Denominations.

The INDEPENDENTS, or CONGREGATIONALISTS, in England come next to the Methodists; they are the most ancient community of Dissenters. They maintain that each church is its own ruler, and thus dispense with both episcopacy and presbyteries. They first appeared in the time of Elizabeth, under whom they were very harshly treated; in consequence great numbers repaired to North America; but their principles triumphed under the Commonwealth. In 1831 the majority of their churches were formed into the Congregational Union of England and Wales, incorporated in 1902. There are 51 county and other Associations in England and Wales, with 4,633 churches and preaching stations containing 1,668,137 sittings; the number of ministers in the British Isles is 3,130. Of these 252 are temporarily without pastoral charge, 86 are engaged in collegiate and tutorial duties, 41 are occupied in secretarial work, and 357 by reason of age or ill-health have retired from pastoral duty. CHAIRMAN, 1907, J. Compton Rickett, M.P., D.L. *Sec.*, Rev. R. J. Wells. *Chief Clerk*, C. Stancliff (Memorial Hall, Farringdon St.).

The *Countess of Huntingdon's Connexion*, with 44 chapels and mission stations, is the outcome of the Eighteenth Century Revival. It is governed by nine trustees assisted by an annual conference of ministers and delegates. *Sec.*, E. Dolby Shelton. *Offices*, 38 Eldon Street House, London, E.C.

The BAPTISTS are, in all respects but one, similar to the Independents; they have the same form of Church government, and differ but in one point of practice—viz., the Baptism by immersion of believers only. Like the Congregationalists, they are for the most part grouped in Associations of churches, and the majority of these belong to the Baptist Union, which was formed in 1873. In the British Isles there were, in 1905, 3,988 chapels and 2,108 pastors. The members numbered 426,563, Sunday-school teachers 57,240, and Sunday scholars 581,861. In addition to the members in this country, the Baptists have numerous chapels and several hundred ministers in the Colonies. In the United States they form one of the most numerous religious bodies there, the "members" alone numbering nearly 7,000,000. Their missionaries are employed in India, Ceylon, China, Palestine, the West Indies, Africa, Brittany, and Italy. *Sec.*, 1906-1907, Rev. J. H. Shakespeare, M.A., Baptist Church House, Southampton Row, London, W.C.

The WELSH CALVINISTIC METHODIST CONNEXION is the only Church of purely Welsh origin, and embraces a very large section of the Welsh-speaking population. The form of Church government is presbyterian, and the Church is in federation with the United Free Church of Scotland and with the Presbyterian Church of England, *q.v.* At the present time the body numbers—churches, 1,411; chapels and places of worship, 1,620: ministers and preachers, 1,248; deacons, 5,946; communicants, 189,164; on probation, 3,050; Sunday-school teachers, 27,112; scholars and teachers, 222,339; number belonging

to the congregations (including communicants), 343,757. A sum amounting to £306,825 was collected for various religious purposes in 1905. One of the features of the Welsh churches is the Sunday-school, which is attended by adults as well as children; the vernacular is the language generally used in these schools. There are 283 English congregations with 27,653 communicants; all the rest are Welsh. MODERATOR of General Assembly, 1906-1907, Rev. Thomas Grey, Birkenhead. *Statistical Secs.*, Rev. J. Evans, Denbigh; and Rev. T. J. Morgan, Garn, near Aberystwith.

The SALVATION ARMY is one of the most recent religious denominations, and one of the most successful. In Aug., 1906, the number of *Officers*, *Cadets* and *Employés* was 20,077, of *Corps* and *Outposts* 7,680, *Local Officers* 45,320. The number of countries occupied was 52, and of languages used 32. Connected with the Salvation Army are numerous philanthropic institutions under various denominations, including 110 Rescue Homes for Fallen Women, 132 Slum Posts, 15 Prison-Gate Homes, 183 Shelters and Cheap Food Depôts for the Homeless, 102 Workshops and Factories, 45 Labour Bureaux, 13 Farms, &c. GENERAL, William Booth.

MINOR RELIGIOUS DENOMINATIONS.—The chief are the Unitarians, with about 350 ministers, 345 chapels, and other places of worship. The Society of Friends, which consists of 18,466 members in Great Britain and 2,528 in Ireland, has 424 recorded ministers, including over 150 women; their places of worship, in 1905, numbered 421. *Central Office for Great Britain*, 12 Bishopsgate St. Without, E.C. Ireland has a separate organization, with *Office*, 6 Eustace Street, Dublin. The **Churches of Christ** have 13,844 members and 179 churches in the British Isles, with 153 Sunday Schools, 1,583 teachers and 16,041 scholars. The **Moravians** (*Offices*, 32 Fetter Lane, E.C.) have about 50 congregations and preaching stations. The **Catholic Apostolic Church** have above 80 churches; the **New Jerusalem Church** (**Swedenborgians**), 75 societies, with 6,063 registered members; the **Latter-Day Saints** (**Mormons**) have 82 churches. Among the inhabitants of the United Kingdom are about 156,000 **Jews**, mainly in London and other large towns, who possess 200 synagogues, with about 200 ministers and readers (*Chief Rabbi*, Dr. Hermann Adler, Chief Rabbi's Office, Finsbury Square, E.C.). The Jews support their own poor, and raise about £150,000 annually for religious and benevolent purposes. Their number throughout the world is computed at various totals, ranging between 8 and 9 millions. The **Brethren**, or **Plymouth Brethren**, have 23 places of worship in London and the suburbs. The Greeks have churches in London, Manchester, and Liverpool. The Armenians have churches in London and Manchester; the French, Dutch, Swedes, and Swiss in London, Norwich, and Canterbury; and a mosque has been opened for Moslems.

# The Roman Catholic Church.

IN *England*, from 1623 to 1850, Catholics were under Bishops, as Vicars-Apostolic, with first 1, then 4, and afterwards 8 Districts or Vicariates; in 1850 the Hierarchy was restored, by the erection of 1 Archiepiscopal and 12 (now increased to 15) Episcopal Sees. In *Scotland* Catholics were under Bishops, as Vicars-Apostolic, from 1694 to 1878, with first 1, then 2, and afterwards 3 Districts or Vicariates; in 1878 the Hierarchy was restored, by the erection of 2 Archiepiscopal and 4 Episcopal Sees. In *Ireland* the Hierarchy consists of 4 Archiepiscopal and 23 Episcopal Sees.—Besides the United Kingdom, Hierarchies are established in British America, India, and Australasia. There are now in the British Empire 30 Archiepiscopal and 106 Episcopal Sees, and 34 Vicariates and 12 Prefectures Apostolic. Including 2 Delegates Apostolic, 7 Coadjutors and 7 Bishops Auxiliary, the Archbishops and Bishops now holding office in the British Empire are 180, distributed as follows:—

THE University of London was first incorporated by Royal Charter on November 28th, 1836, purely as an examining and degree-conferring body, with certain affiliated colleges, supplemental Charters being granted in 1850, 1858, and 1878. The University was reconstituted in 1900, and has now an "Academic" Department for the organisation and control of higher education in its various constituent "Schools" and other Institutions throughout London, as well as an "External" Department for the continuation of its old functions of examining and conferring degrees upon students throughout the country and in all parts of the Empire. There is also a department for "the Extension of University Teaching," which supervises the organisation of "Local Lectures," *i.e.*, University Extension and the Inspection and Examination of Schools.

## TECHNICAL EDUCATION.

THE development of technical education during the past few years has been very marked. The City and Guilds of London Institute was one of the first organisations which was established to meet the special educational requirements of the industrial population and to supplement the more general scientific and artistic training afforded by the Science and Art Department. The passing of the City of London Parochial Charities Act in 1883 was a step of great importance to the Metropolis, as it provided for the establishment of polytechnics in various parts of London on the model of Mr. Quintin Hogg's original institution at Regent Street. But the country, as a whole, did not obtain the necessary facilities for the development of technical education until the passing of the Technical Instruction Act in 1889, which gave County Councils the power to raise a rate of 1*d.* in the £ for supplying and maintaining technical instruction, and the Local Taxation (Customs and Excise) Act, 1890, which handed over to County Councils an annual sum, then amounting to about three-quarters of a million, as applicable to technical education. During the past few years the amount of the annual Exchequer contribution under the provisions of this Act has increased, and in the year 1902–3 it amounted to £968,000, of which over £900,000 was appropriated by County Councils to technical education. Many local authorities have further raised rates under the Technical Instruction Act, 1889. The grants under the Act of 1890 have hitherto been made to the Councils of Administrative Counties and County Boroughs, and have been administered by committees of these Councils, which, in some cases, consisted entirely of Council members and in other cases contained a certain proportion of outside members.

These technical instruction committees have, under the Education Act of 1902, been merged in the new Education Committees. The Technical Instruction Acts and the educational sections of the Local Taxation (Customs and Excise) Act have been suspended by the new Act, the powers of local authorities have been materially increased, and the terms "Technical Instruction" and "Technical Education" have now no place in the Statute Book. The new education authorities have power to spend upon higher education, including secondary and technical education, such sums out of the rates as they may think fit. In county boroughs the amount that may be thus expended is unlimited; in counties the amount may not exceed the proceeds of a 2*d.* rate, unless the special permission of the Local Government Board is obtained.

The Education (London) Act, 1903, which applies the provisions of the Education Act, 1902, with certain modifications, to London, came into force May 1st, 1904.

The principal technical institutes maintained or aided by the L.C.C. are the following:—
